On the Cover:
The Katwanaa village family planning clinic in Machakos District, Kenya.
The Rockefeller Foundation is a philanthropic organization endowed by John D. Rockefeller and chartered in 1913 "to promote the well-being of mankind throughout the world." It is one of America's oldest private foundations and one of the few with strong international interests. From the beginning, its work has been directed toward identifying and attacking at their source the underlying causes of human suffering and need.

Today the Foundation works in three areas: international science-based development and, in the United States, the arts and humanities and equal opportunity. Its programs are carried out through grants and fellowships to institutions and individuals.

The Foundation concentrates its efforts on selected programs with well-defined goals, but tries to remain flexible by adjusting its course to reflect new needs and opportunities. In addition, the Foundation maintains the Bellagio Study and Conference Center in northern Italy for conferences of international scope and for residencies for artists and scholars.

The Foundation is administered by its president through a staff drawn from scholarly, scientific, and professional disciplines. An independent board of trustees, which meets four times a year, sets program guidelines and financial policy and approves all appropriations.

This report describes our projects and programs for 1988 in detail. For information on applying for grants and fellowships, please see the last page of this book.

© 2003 The Rockefeller Foundation
In 1988 the world moved politically toward accommodation. Global divisiveness eased; regional disputes moved toward settlement; world leaders turned to the language of tolerance and the machinery of cooperation.

At the same time the signs of deeper instabilities and imbalance persisted. For millions, 1988 was a year of famine. Drought in some areas, floods in others, and deforestation throughout the tropical zone underlined warnings of environmental deterioration. And for many of the poorer developing countries 1988 was again, in the perverse logic governing the cycle of international investment, trade, debt, and aid, a year of net capital outflow to the First World and donor agencies.

At home, our own country was wealthier—and less at ease. We were less certain about what to do about the underclass, about the homeless, about drugs.

We appeared increasingly unsure of the terms of the national social compact. Our leadership was ambivalent and our people hesitant to affirm fully the values of racial equality and open opportunity defined and adopted in the past two decades.

1988 was also the year that the Rockefeller Foundation celebrated its 75th anniversary. As one new to the world of organized philanthropy, I was particularly struck by the characterization of foundations by one of the 75th anniversary speakers, Dr. Adolpho Martinez-Palomo, a distinguished Mexican scientist who has been an active participant and adviser in a number of Foundation-supported programs, and whose father was a Rockefeller Foundation fellow. He said: “The ancient and noble will to share has become rational in American foundations through the application of objective criteria to determine useful goals through appropriate means. Thus, the mind blends with the heart in the difficult search for meaningful actions.”

The search for “useful goals” reminds us that the human race for the first time faces three ultimatums with relatively short deadlines. We must develop institutions and patterns of cooperation that will allow us to avoid blowing ourselves up; we must understand and reverse the destruction we are wreaking upon the fragile, 20-mile-thin film of air, soil, and water around the globe in which all life takes place; and within this biofilm we inhabit, humankind must find a workable balance among food production, family size, and health.

Realities insist. In a world and a nation like ours, a foundation must assess its position clearly and pick its targets carefully.

Our resources are small.

The problems are large and complex.

The terrain is crowded with other actors. Many are bigger and command greater resources; few enjoy more flexibility or independence.

No foundation can be strong without a deep commitment to its own society. For 25 years the Foundation has worked to help assure full participation of minorities in American life. Most recently we have selected the underclass as the principal target of this commitment, directed through our equal opportunity division.

The term underclass refers to the two to three million Americans who live in areas marked by almost complete alienation from
the institutions of mainstream America. The Foundation has set out to fund action at the ground level and learning at universities and research centers to increase sharply the number of Americans studying this problem and working to find answers. During 1988, we followed in the footsteps of the Ford Foundation and other foundations by adding a community development dimension to our equal opportunity program to encourage local centers of capital, competence, and clout in poor neighborhoods.

In the arts and humanities we are on a course encouraging scholarship and experimentation that explore and advance our understanding of the diversity of our own country and the global interconnections that shape our lives. Philadelphia school superintendent Constance E. Clayton, another speaker at the 75th anniversary, cited her fellowship under an earlier equal opportunity program as “making a difference” in her career. And on our arts and humanities program in the schools, Dr. Clayton was equally positive:

“I implemented the teaching of humanities and the first across-the-curriculum writing program through seed money from the Rockefeller Foundation. That opportunity not only launched a national emphasis (which has been adopted in 10 other large school systems with Foundation assistance), but served as a catalyst for our teachers to recommit themselves to the reality that urban students can learn, can read, can write, compute and think, and understand and appreciate their culture and the cultures of others. The arts and humanities brought balance to our curriculum.”

Dr. Martinez-Palomo was one of several anniversary speakers who also reminded us of the Foundation’s most distinctive tradition—its work in the developing world. He noted that we live in “a world that day by day becomes more Asian, more Latin American, and more African in terms of the sheer number of people and the magnitude and depth of their problems, a world in which inequality is on the rise.”

A critical undertaking of this century and the next is the drive by new and developing countries to achieve economic prosperity, social fairness, and political stability against handicaps and under conditions sharply different from those faced by the economically advanced countries in their early development.

The Foundation has targeted the challenge of assisting the South to develop its own capacity to employ modern science and technology, primarily in the areas of agriculture, health, and population. This International Program to Support Science-Based Develop-

Source: U.S. Bureau of the Census, International Data Base
ment also focuses on cultural and the other non-scientific factors that determine whether in practice the results of science contribute to equitable development.

The strategy is two-pronged: helping to redirect some share of the best scientific minds and facilities in the North to the problems of the South, and helping the South acquire the facilities and trained cadres of scientists and technologists necessary to meet its challenges directly.

We continue, for example, work that succeeded in genetically transforming rice by introducing new genes; underwriting the testing and introduction of a range of contraceptive devices to allow women more choice in determining family size; funding a multi-country investigation into the production, harvesting, and use of cassava, a food staple for millions of the rural and urban poor in Africa; supporting affiliations and training agreements, in cooperation with the World Health Organization, under which 40 First- and Third-World schools of medicine and public health are jointly seeking ways to prevent or treat tropical diseases.

These ongoing programs were joined in 1988 by several new emphases—among them planning for a health transition initiative that would be based on bringing together the medical and social sciences concerned with reducing morbidity and mortality rates in poorer countries, and efforts to bring the AIDS epidemic under control in selected African countries. More generally, the Foundation expanded its field-based programs in Africa by adding professional staff in agriculture, health, and population and by increasing its funding commitments.

During the course of 1989, we will also seek to define and put in place a program concerned with the fragile biofilm. It will be important to integrate concern for the global environment with the international and technical dimensions of our Science-Based Development program, and to insist that the issues of development and the environment are structured as part of one overall framework. We will also add a small program supporting innovative approaches to limit the spread and use of nuclear arms and other weapons of superordinate destructiveness.

A final lesson underscored during our 75th anniversary celebration deserves attention here. David Rockefeller, Sr., expressed his hope that “the Foundation will find ways to cooperate with like-minded public and private groups throughout the world, so as to leverage its resources and create the effective partnerships needed to generate the sustainable economic growth that is certainly required if the Foundation is to address the staggering problems before us.”

This sentiment and strategy is shared by our board and staff alike. Much of what the Foundation has been able to accomplish in the past and present has been the result of such partnerships. Examples abound.

One of the most productive partnerships has been the Consultative Group on International Agricultural Research (CGIAR), which grew out of Ford and Rockefeller Foundation programs and meetings at our Bellagio Study and Conference Center. Today the CGIAR is an association of 13 international agricultural research centers and a roster of 40 donors, including the World Bank, the U.S. Agency for International Development and its counterparts in scores of other countries, plus the Ford, Rockefeller, and W. K. Kellogg foundations in this country.
By the time the Foundation's Great Neglected Diseases program concluded last year, the MacArthur and Clark foundations, the World Bank, the U.S. National Institutes of Health, and numerous other donors had joined in support of the 17 participating research laboratories. The program that succeeded it—Health Sciences for the Tropics—is jointly underwritten by the Foundation and the World Health Organization.

More than 10 other donor organizations are helping to fund the International Clinical Epidemiology Network (INCLEN), which was begun by the Foundation but is now an independent entity working through 27 Third-World medical schools to help their countries identify, track, and develop community-based, affordable approaches to their most important health problems.

We are one of six funders, including the World Bank, the International Development Research Centre of Canada, and the Ford Foundation, supporting the African Economic Consortium to improve macroeconomic policy analysis and training in sub-Saharan Africa. Similarly, but in this country and over a period of years, we have been but one of a large group of funders supporting the NAACP Legal Defense and Educational Fund, the Lawyers' Committee for Civil Rights Under Law, the Mexican American Legal Defense and Educational Fund, and other groups at the forefront of securing and protecting the basic rights of America's minorities.

At last count, our initiative to improve the teaching of the arts and humanities in U.S. public schools had 97 cooperating institutions and donor groups assisting the 11 participating school system projects. These included 19 colleges and universities, 25 national and international business corporations, and the Pew Charitable Trusts, the Danforth and Gannett foundations, and 16 other foundations. And the fund to enable U.S. artists to participate in international exhibitions and festivals could not have been launched without the joint participation of the National Endowment for the Arts, the U.S. Information Agency, and the Foundation; it can reach its full potential only if other private foundations become partners in the years ahead.

None of our program areas is exempt from this need for partners. It is a need that can only grow over the years ahead as complexity grows, as the number of actors multiplies, and as our own funds continue to shrink in relation to the scale of the problems we have chosen to tackle.

During a transition in leadership a new executive comes to understand the strengths and depth created by past leadership and accomplishment. My colleagues and I are deeply in the debt of Richard Lyman. During the difficult years of this decade, when our ideas and our nation generally were unsettled and unsure, he steered the Foundation with great integrity and with deep care for its people, program, and values.

The trustees and staff of the Rockefeller Foundation enter 1989 understanding that the problems and challenges are great, and recognizing that our resources are limited and our knowledge incomplete. Knowing this, and strengthened by those who have worked before, we set out deliberately and thoughtfully to wrestle with the toughest problems, to seek the best ideas, to enlist the widest possible cooperation.

International Program to Support Science-Based Development

The premise of this program is that the well-being of people in developing nations can be advanced with the help of science and technology. Many countries in the developing world are eager to use the results of modern science and technology in bringing food, health, education, housing, and work to their people, and we believe that by building partnerships between industrial and developing nations this can be accomplished.

Although the program is science-based, it also emphasizes other factors—local culture and values, equitable policymaking, competent management, and production capability—that can determine whether science and technology effectively contribute to the well-being of people in the developing world. As a result, we encourage work that connects the products of research with adopting strategies that are both effective and equitable.

This program provides the focus for three of our divisions: agricultural sciences, health sciences, and population sciences.
Science-Based Development: Agriculture The agricultural sciences division supports work: using biotechnology to improve crops that are developing-country staples, improving family food production systems in Africa, and enhancing international collaboration in agricultural research.

Highlights of the Year
The agricultural sciences division this year expanded its work in the field and added staff overseas to manage its growing program. John O'Toole, a crop drought specialist working from a post in New Delhi, will manage the rice biotechnology programs in Asia. Economist John Lynam will run the east African programs, including the cassava research project launched last year. And Malcolm Blackie, former dean of the faculty of agriculture at the University of Zimbabwe, will be responsible for programs in southern Africa.

Progress in Rice Biotechnology
Projections indicate that in the 1990s and beyond, rice production in many developing countries will be unable to keep pace with demand unless new ways of improving the genetics of this vital crop are used. The Foundation's program to improve rice by using biotechnology shows steady progress. This year Foundation-supported scientists made several discoveries that will be central to introducing useful traits, such as resistance to insect pests, cold, and flooding, into cultivated rice. They also continued their frontier work to understand the genetic nature of the developing world's most important crop.
Milestones in the program this year include:
- The genetic transformation of rice by introducing new genes, at laboratories in the U.S., Great Britain, and Japan. Many of the transformed plants are fertile, a first for any cereal.
- The transfer of genes for resistance to an insect pest from a wild relative of rice into cultivated rice, an effort headed by Foundation cytogeneticist Lesley Sitch, at the International Rice Research Institute in the Philippines.
- Successful use of anther culture, a shortcut technique, to obtain higher-yielding lines tolerant to cold in half the time required with traditional plant-breeding techniques.
- Progress in working with tropical rice, which is always more resistant to genetic manipulation than its temperate cousin, by researchers at Purdue University.
- Completion of a genetic map of rice based on DNA markers, an aid to identifying important genetic traits, and the establishment of a repository and distribution center for these and other DNA clones at Cornell University.

Support of biotechnology this year also included work in two other crops important in the developing world: maize and cassava. We funded a group of Mexican scientists looking for ways to improve maize using molecular genetic maps and markers. Their laboratory—the Center for Research and Advanced Studies at Mexico’s National Polytechnic Institute—is on its way to becoming a center of excellence in Latin America for research and training in plant genetic engineering.

The Foundation is also funding a program at Washington University in St. Louis to see whether biotechnology techniques successful with tomato and tobacco plants can be applied to improving cassava, an edible root that is the main staple food for millions in Africa. Using this program as a starting point, we are also supporting the establishment of a small international research network for biotechnology research on cassava.

Measuring the Impact of Technical Change How much or how little new technology improves the lives of poor and vulnerable people is a complex issue. Even how to measure its effect is not clear. Some observers, for example, have criticized new agricultural methods, with their dependence on new varieties, irrigation, and fertilizers, for failing to improve the lives of the poor in developing countries. But the impact of this new technology has generally been examined from the limited perspective of a single discipline or factor.

To help set useful and realistic priorities for future research, the Foundation has been supporting comprehensive assessments of new agricultural technologies in terms of
their impact on a range of important factors, including labor, nutrition, income, prices, and the environment. Such comprehensive studies on rice are under way in China, India, the Philippines, Indonesia, Nepal, Bangladesh, and Thailand. Funds approved in 1988 will be used to continue the rice studies and to begin similar work on other crops.

Crops in Africa
Bananas, the principal starchy crop of Uganda, supply 17 percent of that country's food and are a major source of income for many peasant farmers. But yields have been declining in recent years because of pests, disease, and loss of soil fertility.

Funds from the Foundation, the U.S. Agency for International Development, and the International Development Research Centre of Canada will enable Uganda's Makerere University and the Ministry of Agriculture improve banana productivity in that country. By conducting experiments, identifying the factors constraining productivity, and launching on-farm trials with bananas, researchers will evaluate possible methods to overcome these constraints.

Maize, the most important food crop in Malawi, will receive Foundation attention through a research program to develop new varieties of the crop more acceptable to small farmers. Maize is planted on three-quarters of the land owned by small farmers in Malawi, but its production is falling to keep pace with demand because farmers find available improved varieties (which are soft-grained) unsuited to their processing and storage methods and more susceptible to insect attack and disease than traditional lower-yield, hard-grain varieties. This research will seek to increase the yields of the maize varieties favored by the farmers.

Soil, Water, and Livestock
Soil fertility and water management have received little attention in Africa, where it has seemed more important to concentrate on crops themselves. This year an appropriation will fund work on these resource issues as well. One grant will support international efforts in field research, training, and scientific exchange to examine problems of soil fertility. Another will enable researchers in Zimbabwe to compare the various kinds of irrigation systems in that country to see which design and management characteristics are best.
Although economic growth in the developing world depends on preserving natural resources, tropical forests, like this one in Brazil, are increasingly destroyed. The Foundation is funding the World Wildlife Fund to establish a program to study the issues facing governments as they try to improve the management of forests.

Another key factor in determining whether African families can feed themselves is the health of their livestock. Animal diseases cause losses to millions of farmers in the developing world, and in Africa disease control methods have not been tailored to local conditions and needs or have involved expensive drugs and pesticides.

The International Laboratory for Research on Animal Diseases in Nairobi is making progress in the search for vaccines for two devastating livestock diseases—trypanosomiasis (the animal form of human sleeping sickness) and East Coast fever. Our funds will be used to continue the design of more appropriate vaccines and to assess in advance the likely consequences, positive and negative, of introducing such vaccines in Africa.

**Preserving Tropical Forests**

Although the preservation of forests is vital to economic growth in the developing world, forest resources are increasingly squandered and destroyed. Billions of people depend on forest products for construction, cooking, and heating, yet widespread policies that profoundly affect local groups are often made without a sense of local context.

This year the Foundation funded the World Wildlife Fund to establish a program of small grants that will enable specialists in developing countries to conduct studies on timber leasing, agricultural expansion, land tenure, energy, and other problems and issues facing their governments in tropical forestry management. The aim is to move such research into the countries that must manage these natural resources and to demonstrate the potential value of forestry to economic development as well as the benefits of improved forestry management. The grants, of up to $25,000 for one or two years, will be given through the Osborn Center for Economic Development, a joint program of the World Wildlife Fund and the Conservation Foundation.
Science-Based Development: Health The health sciences division supports work that uses pharmacology and vaccinology to treat and prevent major diseases of the developing world. The division also supports work that builds capacity in the developing world for population-based health care.

Highlights of the Year
In 1988, 40 laboratories in 16 collaborative groups received their first grants under the initiative “Health Sciences for the Tropics,” a joint program with the World Health Organization (WHO). Within each group of laboratories, selected in open competition, scientists from the developed and developing worlds are seeking preventive or therapeutic means to control amebiasis, Chagas’, childhood diarrhea, malaria, and schistosomiasis—major diseases of the developing world.

Health Sciences for the Tropics is the follow-up program to the Foundation’s Great Neglected Diseases initiative, which ended in 1987. The earlier program had successfully brought research on developing world disease out of the backwaters of scientific investigation and into some of the most sophisticated laboratories in the world. The task now is to continue to pursue research leads on these diseases by linking laboratories in both the developed and developing world, a strategy designed to forge strong scientific bases in the developing world for controlling diseases there.

During the coming year, the development of research competencies will be advanced at each developing-world site through collaborative research, training programs, and the exchange of personnel. Foundation and WHO officers, together with the leaders of the participating groups, will also work with the program’s advisory council to organize and implement a schedule of periodic site visits and scientific meetings to assess and report progress.

Start-up funding was also provided for the Pan American Health Organization’s plans to form two regional research centers for the development and testing of vaccines in Latin America. Health ministers in the western hemisphere have selected Brazil and Mexico as sites where program priorities will be established on the basis of epidemiological and cost-effectiveness considerations.
A health worker in South America draws blood from a child to test for malaria. Mosquitoes carrying malaria are increasingly resistant to pesticides, and as a result, the disease continues to affect huge parts of the globe.

Population-Based Health Care
Understanding the ebb and flow of health and disease in populations, and the importance of devising cost-effective strategies for health interventions, are powerful themes within the health sciences division. They are basic to the Foundation's International Clinical Epidemiology Network (INCLEN), which now encompasses 27 units in African, Latin American, and Asian medical schools and five training centers in Canada, Australia, and the United States. In addition, a group of French fellows who began studies this year under INCLEN auspices will establish a training center at Claude Bernard University in Lyon, which can seed medical school units in francophone areas of the developing world.

Faculty cadres in the developing-country medical schools are trained in the developed-world university centers. These cadres then return to staff their medical school units. They conduct research and training programs focusing on their countries' most serious, large-scale health problems and on the development of less costly and more effective health measures and policies.

By the end of this year, 111 fellows from 25 medical schools in 15 developing countries had completed their studies, and most were already at work in their units. Research projects include efforts to shorten the duration of hospital treatment for spinal tuberculosis in Thailand and, in Colombia, a study to determine if better household ventilation of woodsmoke from cooking stoves might reduce the high incidence of lung disease in women.

Working to Control Malaria
In the battle against malaria, the balance of power has swung toward the disease. Mosquitoes carrying malaria have become resistant to insecticides, and the parasite itself has developed resistance to the major antimalarial drugs. As a result, the disease remains endemic in areas of the world inhabited by an estimated 2.7 billion people.

An appropriation approved in 1988 supports continuation of promising work, also begun under the Great Neglected Diseases program, to uncover the fundamental biochemistry of the malaria parasite, knowledge that is vital to drug and vaccine development. The endeavor was initiated by a group of scientists at Rockefeller University and New York University, now organized as the Malaria Consortium. Scientists at four other institutions are scheduled to join the consortium as additional grant funds become available.

Photograph Excised Here
INCLEN was incorporated as a not-for-profit entity in 1988 as the first step toward planned administrative and financial independence for the growing network. In addition to our support, which was continued this year, INCLEN now receives assistance from 10 national and international aid agencies.

Another element in the strategy for enhancing national capabilities for population-based health care is the linkage of ministries of health with local educational and research institutions to mobilize resources for identifying solutions to major health problems. The first of these initiatives—the National Epidemiology Board of Thailand—has been organized, and has identified a short list of priority health problems, appointed disease-specific committees to collect further data and advise on control programs, designed research projects, and begun awarding research and training grants and contracts. A 1988 appropriation provides two years of additional support for this initiative.

Dr. Lamsudin Rusdi, who participated in the Newcastle, Australia, INCLEN program, is now a member of the Clinical Epidemiology Unit at Gadjah Mada University, Yogyakarta, Indonesia. Dr. Rusdi, a specialist in caring for stroke victims, examines a participant in a study to determine what factors may contribute to strokes.
Mobilizing Community and Government Support

The *Aedes aegypti* mosquito, which breeds in and around people's dwellings, carries both yellow fever and dengue. There is a vaccine for yellow fever, but because earlier efforts to control this urban mosquito foun-dered, dengue has become the world's most serious insect-born virus disease. Dengue is endemic in Mexico, Central America, and countries of the Caribbean basin, and large dengue outbreaks have recently occurred throughout Brazil, Paraguay, northern Argentina, and Bolivia. In Southeast Asia, 1.5 million children have been hospitalized with dengue hemorrhagic fever over the past 25 years, and countless other victims of the disease have been beyond the reach of hospital care.

Most recently, however, in some tropical countries there has been a resurgence of interest in trying once again to eradicate the *A. aegypti*. A 1988 appropriation will enable Johns Hopkins University specialists to work with teams from Mexico and Honduras in seeking more effective ways to mobilize community support for mosquito eradication and then apply this knowledge in national control programs intended to be demonstrations for all Latin America.

Continuing support was approved for WHO's program to engage the ministries of health, education, agriculture, and other government sectors in joint programs to improve the health of their country's people. Our funds will underwrite demonstration programs in Indonesia, Gambia, Egypt, and Zambia. In Gambia, for example, the challenge is to coordinate a variety of health projects that have been operating independent of each other in an area where mortality rates for women and children remain high.

Support was also continued for the Task Force for Child Survival's effort to help the Ugandan Ministry of Health develop and conduct a nationwide immunization program against diphtheria, neonatal tetanus, whooping cough, polio, and measles. The task force is a coordinating agency for efforts funded jointly by the Foundation, WHO, the World Bank, and the United Nations Development Programme. This year the provision of equipment, technical advice, and resident advisers has been expanded to meet the challenge of the country's AIDS epidemic. This has included design of a national case detection system and a number of surveys.

To help the Ugandan ministry continue and expand these programs, a task force team has made a detailed survey of external sources of funds earmarked for the health sector. A "donor coordination unit" has been formed, guidelines have been set for coordinating external assistance, and funding sources have been identified for specific health projects.
In the months ahead, the team will assist the ministry with an AIDS information and education campaign and continue to bolster the immunization effort, including an improved disease reporting system. As information becomes more reliable, this system can serve as a basis for determining what program areas need to be reinforced, evaluating intervention efforts for effectiveness, and expanding training in health districts as needed.

And finally, a celebration this year served as a reminder that while efforts to control the major diseases of the developing world can be enormously costly in terms of time and resources—and occasionally lives—success can be the reward of perseverance. The occasion was an international scientific meeting in Rio de Janeiro to mark the 50th anniversary of the introduction of yellow fever vaccine in Brazil. The vaccine was developed in a Rockefeller Foundation laboratory. Five members of our staff died in the quest; in 1950, Foundation scientist Max Theiler won the Nobel Prize in medicine and physiology for his work in developing the vaccine. Today, Brazil produces and exports the vaccine, most recently to Africa, where outbreaks of yellow fever are occurring.
Science-Based Development: Population The population sciences division seeks to enhance reproductive choice in the developing world by supporting work to develop new contraceptive technologies, increase the availability of existing technologies, and identify the constraints, risks, and barriers that affect contraceptive use. The division also supports selected developing countries in strengthening the professional competence needed to establish population policies and effective management of family planning programs.

Highlights of the Year
In 1988 the emphasis in population sciences was to expand capacity in the developing world for contraceptive development and related research and for defining and implementing national population policies. Included were major appropriations for new initiatives in China and Latin America and continued funding on a similar scale for a sub-Saharan Africa program and a research network involving biomedical and social scientists from 12 developing countries.

New Initiatives in China and Latin America
One of the division's largest funding commitments will assist the Chinese Academy of Sciences, which administers 124 research institutes, to implement its plans for creating centers of excellence in reproductive and developmental biology. The country's record for originating biological research on methods of fertility regulation is impressive. The aim is to move three of its best training
and research institutes into the newest and most advanced areas of reproductive and developmental biology, to support advanced research projects at other institutes, and to encourage cooperation among Chinese reproductive biologists.

The population of tropical Central and South America, now 277 million, will grow by 97 million by the year 2000. This compares with the combined U.S. and Canadian population of 272 million, which will grow by 23 million in the same period. In response to the need for Latin American professionals trained in Latin America to develop and implement national population policies, the Foundation is supporting doctoral-level programs in Brazil and Mexico in the social-science aspects of population studies. These programs are now attracting students from other countries in the region. In addition, we provided partial support for the formation, in 1985, of a network of over 40 Latin American social science centers carrying out research on population issues.

This year the Foundation appropriated funds to expand training, research, and intra-regional cooperation in reproductive biomedicine and family planning. This new initiative will assist three leading Latin American institutions to become regional centers for advanced training—ranging from fundamental research in reproductive biology to clinical studies on women’s health to applied family planning. In addition, a new regional organization created by Latin American scientists will use our funds to begin a fellowship program matching promising young scientists with appropriate training centers both in the clinical subspecialties of human reproduction and in demography and other relevant social sciences.

AFPOP, a program to improve understanding of population trends in sub-Saharan Africa, is helping a number of institutions strengthen training and research in the population sciences. Here, a family planning clinic in Kenya.

An African Focus
The Foundation extended its support this year for a program to strengthen the capacity of African institutions and improve understanding of population trends in sub-Saharan Africa, known as AFPOP. The program addresses some of the most important factors impeding the development of effective population policies in sub-Saharan Africa: the shortage of personnel trained in the population sciences, the generally weak institutional capacity for undertaking training and research, and the lack of basic demographic trend data.

AFPOP is helping a number of institutions in sub-Saharan Africa to strengthen training and research in the population sciences, and, ultimately, to improve population policies in the region. In the most recent round of the AFPOP research competition, studies selected for funding will investigate such topics as the effects of agricultural development on women’s access to employment and contraceptive services in Nigeria, whether family planning services should be extended to adolescents in Zambia, and the
socioeconomic and cultural determinants of family size in Malawi. Additionally, a number of regional meetings were supported to promote the exchange of information and networking of individuals. Among these was the African Council on Communication Education's workshop on the use of theater to reach young people in rural areas with information about reproductive health.

The Foundation also approved an appropriation concluding its support of the University of Pennsylvania's African demography training and research program. Begun in 1979 with Foundation assistance, and now solidly established and attracting support from a number of other sources, this program has been a leading source for doctoral-level training for the sub-Saharan region. Most of the 30 Africans earning doctorates to date have returned home to academic or government posts, and the program has been an important factor in expanding the ability of African states to undertake their own research in demography.

Status of Women and Fertility

Ten new projects were launched this year under the competitive research component of the Foundation's program on the status of women and fertility (SWAF). In 1989, the SWAF competition will continue to encourage applications from developing-country and other scholars on how women's position, autonomy, and status influence whether couples have large or small families and whether they use modern contraceptives.

Another SWAF component, a comparative research project, is being conducted by scholars from India, Malaysia, Pakistan, the Philippines, Thailand, and the United States. They will analyze: (1) the extent to which women's status is improving and the socioeconomic and cultural context in which such improvement is most likely to occur; (2) the role of education and other formal programs and services in speeding up this change; and (3) the interrelations between improvements in women's status and patterns of fertility and contraceptive use.
South-to-South Cooperation

Launched last year, South-to-South Cooperation is a consortium of developing-country scientists in the social and biomedical sciences that is conducting collaborative research projects designed to develop and test new contraceptives and to improve family planning programs and population policies. Scientists in 12 countries are participating.

Projects underway include a study in Kenya, Mexico, Nigeria, Zambia, and Zimbabwe of the health benefits of contraceptive counseling for young women at risk of repeated abortions, the clinical trial in 10 countries of a contraceptive pill that women use vaginally—thus reducing health risks and side effects of oral contraceptives—and a clinical trial in Brazil, Cuba, the Dominican Republic, and China of gossypol as a male contraceptive.

Enhancing Population Awareness

Three-year funding for the Global Committee of Parliamentarians on Population and Development will assist the information exchange activities of this association, which includes world parliamentary leaders, a number of former heads of state, and experts from different development sectors. The committee has assisted the formation of 10 national parliamentary committees in Africa and intends to expand this number substantially. These national groups are involved in a wide range of population and development initiatives within their countries, from proposing legislation to sponsoring public health workshops for women and children.

In addition, national seminars are being planned in Africa on such topics as infant mortality and the relationship of population growth and development. Regional workshops will be continued to enable parliamentarians to interact with scientists, journalists, lawyers, spiritual leaders, and others with diverse viewpoints on issues of child survival, population dynamics, and the environment. Our funds will also support Update, the committee's quarterly published in French, Spanish, and English.

Update on New Methods

NORPLANT implants, contraceptive capsules placed under a woman's skin that prevent pregnancy for three to five years, are now approved for marketing in 12 countries, where more than 150,000 women have used them. An additional 45,000 women are using the implants in clinical or pre-introduction trials in 37 countries. Foundation support continues for studies of NORPLANT's introduction and use in developing countries.

Gossypol, a natural substance found in the cotton plant, continues to show promise as an oral contraceptive for men. Because it suppresses sperm production without affecting sex hormone levels, it is unique among the experimental approaches to fertility control in men. Foundation-funded scientists worldwide have assembled an array of information about how gossypol works, and studies continue on a wide variety of its clinical applications. Dose reduction is being investigated to reduce health risks associated with the use of gossypol.

India's National Institute of Immunology successfully completed in 1988 the first phase of trials with three versions of an anti-fertility vaccine for women. Sponsored by the government of India and supported by the Foundation, the trials established that with each of the tested vaccines, at least one year of protection against pregnancy could be expected, based on the levels of antibodies formed in response to the immunization schedule.

American women once again have the opportunity to include a non-hormonal intra-uterine device (IUD) among their contraceptive choices. The Tcu-380 has been licensed by the Population Council to a company newly formed to market this single product, and distribution began in 1988. It is a research product of the International Committee for Contraception Research, which continues to receive Foundation support.
Joint Programs in Health and Population

Although AIDS is a global disease, transmission patterns may differ from country to country, and approaches to prevention and control must be geared to local circumstances. However, many AIDS-afflicted countries do not have sufficient resources—money or trained professionals and workers—to do the epidemiological and behavioral research so urgently needed to design these strategies.

To help meet this need, the Foundation's divisions of health sciences and population sciences are jointly funding a variety of initiatives that are enabling scientists from developed and developing countries to work together on aspects of the AIDS problem that have not received the attention required.

AIDS and reproductive health is the focus of an international network of scientists organized, with assistance from the Foundation and other donors, by Harvard University's Department of International Health. With an emphasis on the developing world, the network's research agenda probes the relationship between AIDS and other reproductive health issues, such as other sexually transmitted diseases, contraceptive effectiveness and use, and maternal-infant transmission of AIDS.

A second joint appropriation will support research projects in Africa to identify factors that may intensify heterosexual transmission of the HIV virus that causes AIDS, measures that are effective in preventing HIV transmission, and ways to communicate project results to policymakers and program managers.

Improving Women's Health in Africa

Sub-Saharan Africa is the geographic focal point for another joint appropriation, this one to the International Women's Health Coalition. Its aim is to encourage and assist local organizations and institutions to help free women from the disease, disability, and death often associated with reproduction and sexuality. In sub-Saharan Africa, a woman has a 1 in 19 chance of dying from pregnancy-related causes—almost 2 times the risk in India, 3.5 times the risk in Brazil, and more than 300 times the risk in the United States.

The coalition will adapt its experience in 11 Asian and Latin American countries to develop African country-specific programs to strengthen women's organizations, encourage health professionals to take an interest in neglected reproductive health problems, and improve the quality of care offered by reproductive health services.

AIDS affects each country it strikes differently and approaches to its control must be geared to local circumstances. Here a health educator gives an AIDS lecture in a Ugandan school.
Science-Based Development: Special Programming and Fellowships

Special programming supports a small number of projects in science-based development that cross the traditional boundaries of the agriculture, health, and population divisions.

The Foundation also supports a series of fellowship programs in science-based development: advanced training fellowships, social science research fellowships, biotechnology career fellowships, and an African dissertation internship program.

Highlights of the Year
The first group of African scholars enrolled in U.S. university doctoral programs was selected this year to receive Foundation-supported internships for supervised dissertation research conducted in Africa. The 19 individuals selected will pursue research topics as varied as history of land conflict, policy-relevant determinants of infant survival, and environmental control of schistosomiasis (a major parasitic disease of the developing world). The Foundation's sub-Saharan Africa dissertation internship program is designed to counteract the prevailing pattern of young Africans' overseas graduate education, which is centered around research issues outside Africa and has resulted in a generation of African scientists better prepared to work in the host country than to contribute effectively to development objectives at home.

Looking for Answers About Nutrition
Combining the Foundation's interests in agriculture, health, and population sciences, an exploration was funded this year of developing-world efforts to monitor and improve child nutrition. About 40 percent of the world's children under five years of age—some 141 million human beings—are chronically undernourished. Many die from diarrhea, measles, and other lesser diseases and conditions that are often fatal when combined with malnutrition. Those who survive may suffer lifelong reductions in their capacity to learn and to work. Yet there
is little widespread use of nutritional data combined with such relatively simple and affordable correctives as vitamin and mineral supplements.

**Popularizing Science**

Popularization of scientific and technological understanding is essential if expanded programs of immunization, agricultural innovation, environmental protection, and family planning are to be adopted by the people for whom they are intended. Yet there is clear evidence from Africa that scientific concepts provided through school, extension services, and the media have generally not become embedded in home and village life. Current initiatives are fragmented, and scientific and technological premises are still being imposed from outside rather than being meshed with local concepts and economic realities.

An appropriation approved this year will be used to establish a consortium of prominent African scientists, educators, and innovators committed to making science and technology come alive in African education and culture. The consortium’s challenge will include encouraging Africa-based scientific institutions to become more active in popularizing technological literacy; expanding the role of schoolteachers in bridging the gap between school and community-based science learning; and promoting and testing technological and media innovations that appear to be affordable and have the potential to change the ways that children and young adults learn science.

**A Voice for Africa in the United States**

The Foundation has initiated a program designed to strengthen the voice for Africa in the United States. This initiative represents a companion strategy to the Foundation’s activities on the African continent. Our goal is to deepen American understanding of African developments, to strengthen interactions in areas of mutual interest, and to stimulate effective U.S. policy.

This idea grows out of the Foundation’s recognition that U.S. relations with Africa are a matter of low priority for many Americans, even those relatively informed on other public policy issues; that policy toward Africa is fashioned without benefit of deep knowledge and multiple connections of the sort that characterize policy toward Asia and Latin America; and that issues in U.S.-African affairs—including issues of foreign and commercial policy, development, human rights, environmental management, health, and cultural affairs—tend to be treated in isolation from one another.
Exploring the 'Health Transition'
The board of trustees approved funds to explore the validity of the proposition—and the program possibilities embedded in it—that an array of social and economic factors now have as much to do with overall health levels as do health care and biomedical interventions. Proponents of this view contend that morbidity and mortality rates can be driven down to the levels of industrialized nations—termed a "health transition"—only if improvements in health care and medical technology are accompanied by social changes. They also contend that social change required for such a "health transition" is within reach, but that it is not likely to be implemented unless and until persuasive evidence is put forth demonstrating direct links between, for example, investment in raising the economic and educational status of women and sharp improvements in child mortality.

Building a Science Infrastructure
The African Academy of Sciences was founded in 1985 with grants from the MacArthur Foundation, the Carnegie Corporation, and the Rockefeller Foundation, and is now receiving project support from a growing number of donor agencies around the world. An appropriation for core support approved this year is intended to strengthen the academy's capacity to establish an African presence in the international scientific community, improve communication among existing pockets of scientific talent in Africa, encourage new talent and leadership, and inform the development policy debate.

Fellowships
The Rockefeller Foundation has had an advanced training fellowship program for more than 70 years. Its purpose is to select from all over the world men and women of outstanding promise in fields of interest to the Foundation, and to help prepare them to contribute to research, teaching, and public service in these fields. More than 12,000 people have held such fellowships; in 1988 a total of 81 persons held advanced training fellowships—53 that were continued from previous years, and 28 new awards that became active during the year.

Social science research fellowships provide opportunities for young North American and African social scientists to conduct collaborative research in agriculture or population studies at foreign institutions. Biotechnology career fellowships—totaling 13 in 1988 (10 new, 3 renewals)—help Third World scientists to maintain leadership in the development and application of new biotechnology in agriculture, health, and population sciences. The program establishes relationships between biotechnology scientists working at Third World institutions and research teams at advanced laboratories.
Arts and Humanities The arts and humanities division encourages creative artists and scholars and teachers in the humanities whose work can advance international and intercultural understanding in the United States. The division therefore supports activities extending international and intercultural scholarship, increasing artistic experimentation across cultures, and improving international perspectives in American public schools.
Highlights of the Year

Central to the division's activities in support of its guideline to extend international and intercultural scholarship are the Humanities Fellowships. These fellowships are currently offered through residency programs at 26 colleges, universities, museums, and research libraries. Each program is funded in three- to five-year cycles to encourage new areas of humanistic scholarship in diverse areas of international studies, non-Western cultures, and American cultural pluralism. In addition to supporting outstanding individual specialists, the residencies strengthen institutional commitment to this kind of scholarship.

In 1988, eight new fellowship sites were selected by an advisory panel and approved for funding. They include the Center for Advanced Feminist Studies at the University of Minnesota and the Center for the Study of Black Literature and Culture at the University of Pennsylvania, a program at the University of Hawai'i on identity and change in contemporary Pacific cultures, and a program at the University of Maryland reexamining Latin American literary expressions.

Extending the reach of scholarship in one area supported by the Humanities Fellowships, the Foundation and the Institute for Advanced Study at Princeton co-sponsored a conference this year on "The Impact of Women's Studies Research on Academic Discourse." The discussions by some of the leading scholars in the field of women's studies resulted in a broad analysis of the field and an exploration which will help scholars outside the field apply gender theory to their work.

A costume from Trinidad in the St. Louis Art Museum's exhibition "Caribbean Festival Arts." The exhibit is part of the Foundation's effort to support innovative museum exhibits representing non-Western cultures.
Scholarship in Other Settings

Scholarship extends beyond campus lecture halls and libraries, and it is not the exclusive property of scholars. Especially in the arts and humanities, other venues and products of scholarship—museums, film, and television—reach wider and larger audiences.

The Foundation made 21 grants in 1988 to museums and co-sponsored a major conference with the Smithsonian Institution entitled “The Poetics and Politics of Representation.” Grants supporting innovative exhibitions representing non-Western cultures and American populations included awards to the St. Louis Art Museum for an exhibition entitled “Caribbean Festival Arts”, the Studio Museum in Harlem for an exhibition of contemporary African art, and the Smithsonian Institution for establishment of an experimental gallery.

In television and film, two large-scale projects were of particular note. WGBH, Boston’s public television station, received support toward “The Other Americas” produced in consultation with a distinguished team of scholars, this series of 10 one-hour documentaries explores the contemporary history of Latin America and the Caribbean. Significant scholarly participation was also supported by the Foundation to produce the film version of Peter Brook’s theater adaptation of The Mahabharata, which will be screened internationally.

Encouraging Artistic Experimentation Across Cultures

A second guideline in Arts and Humanities—increasing artistic experimentation across cultures—has attracted proposals that range across a spectrum of imaginative possibilities. Grants approved in 1988 included support to:

- Appalshop in Whitesburg, Kentucky, for its Open Windows Festival bringing together artists from Roadside Theater, the Traveling Jewish Theatre, Liz Lerman/Dance Exchange, and Urban Bush Women;
- Repertorio Español in New York, for residencies by Latin American stage directors;
- Choreographer David Gordon’s Pick Up Company, for an ambitious two evening work that profiles America, co-sponsored by 27 presenting organizations from across the country; and
- Baltimore’s Theatre Project, for a six-month tour/residency of Teatro del Sur, a theater collective from Argentina.

The volume of grants activity in the performing arts has doubled since the introduction of this guideline last year, prompting plans for a new grants competition in 1989.
A performing arts production fund will offer support for 20 to 25 projects that promote the creation of adventurous new work reflecting the diversity of American cultural heritage or encouraging interaction with artists from the Southern Hemisphere. By offering a well-publicized competition for projects, the Foundation will seek to reach the most innovative performing artists and arts groups, and through them, their audiences. Further, this format will involve forward-thinking artists, producers, and presenters from around the country to provide peer review in the grant-selection process.

Another new competition scheduled for 1989—a program of fellowships for jazz composers—was designed and funded this year. It will be administered by Meet the Composer. Eight to 10 fellows will be selected annually to receive commissions and residencies for 3 to 12 months with performing arts organizations. Most fellowships will conclude with a finished performance of the commissioned work. The aim of this program is to help create an environment in which jazz composers are accorded new creative and professional opportunities.

The Fund for U.S. Artists at International Festivals and Exhibitions was jointly launched in 1988 by the Foundation, the National Endowment for the Arts, and the U.S. Information Agency. Competition for funding was intense. Grantees included the Philadelphia Museum of Art for a critically acclaimed Jasper Johns exhibition at the Venice Biennale, the Sydney Biennale for its presentation of 18 American visual artists, and 64 performing artists or organizations attending 61 festivals around the world.

Unlike other nations, the United States previously had no formal system of support to enable its artists to participate in international arts festivals and exhibitions. These gatherings are recognized as major vehicles of cultural exchange, providing venue, training ground, and stimulation for creative artists throughout the world.

In 1988, the Foundation’s Intercultural Film/Video Fellowships program was expanded to include documentaries. The review panel selected seven documentary-makers and seven media artists in the second round of this fellowship competition. The widely divergent projects supported include a narrative feature portraying the lives of three women at the turn of the century in the Sea Islands, a documentary examining Western influence on China’s cultural identity, an experimental treatment of the current cultural polarization dividing Puerto Rican youth, and a video project exploring images of Egyptian myths, gospels and creation stories.
Education Reform From Inside the Classroom

The Foundation's program to assist in the reform of arts and humanities teaching in the public schools is known by its acronym CHART (Collaborative for Humanities and Arts Teaching). Its fifth year was marked by the addition of the San Francisco and Arkansas state school systems to the other nine sites in the network: Atlanta, Los Angeles, New York City, Philadelphia, Pittsburgh, St. Louis, St. Paul, Seattle, and 10 school districts in South Carolina.

Consortia made up of the participating public school systems and nearby colleges and universities, museums, and businesses enable teachers to expand their knowledge in the discipline they teach and then to reform arts and humanities offerings within their classrooms and school systems. The emphases at each site vary, but interest in intercultural and international work has deepened, with the increasingly multi-ethnic background of the students themselves inspiring greater attention in the classroom to American cultural pluralism and to the roles of other countries in the American experience. Arkansas, for instance, entered the CHART network with a state mandate to incorporate global education into the high school curriculum. San Francisco's project reflects the superintendent's commitment to improving the speaking and writing skills of the city's high school students, 64 percent of whom are not native speakers of English.

CHART was the subject of a widely distributed report by the Foundation this year. It was also featured in a book published by Teachers College Press of Columbia University, The Empowerment of Teachers: Overcoming the Crisis of Confidence, by Gene Maeroff, a former New York Times education writer and past consultant to the Foundation. Now in its second printing, Maeroff's book makes a case for recognizing teachers as key agents in school reform and for giving them greater educational authority and professional involvement.

Washington Irving High School student Kemi Sijuwade addresses her classmates as Jack K Cohen, international studies project director, looks on. Washington Irving is part of the Foundation's network to improve public school teaching in the arts and humanities—CHART. CHART was featured this year in a book and a widely distributed report.
Equal Opportunity The equal opportunity division seeks to assure full participation of minorities in American life. It supports three approaches attacking persistent poverty in urban America: programs of planning and action in a few selected cities, research and policy analysis, and research and action to strengthen basic skills and family support. To protect basic rights, the division supports litigation and advocacy, voter registration and education, and related research in policy analysis.
Highlights of the Year
The underclass in this country—several million severely distressed individuals who live in poverty and social chaos in neighborhoods nearly totally isolated from mainstream society—continues to grow at an alarming rate, after more than tripling between 1970 and 1980. While a precise accounting of what has happened since 1980 must await results of the 1990 census, it is apparent that an increasing number of families and children are on the edge of falling into the underclass. Minorities are disproportionately represented in this group.

Evidence clearly shows that the group ties down a disproportionate share of public resources, and traditional antipoverty, welfare, and public education programs and institutions have not been effective in changing these conditions.

Beyond this is a growing debate and little agreement. No one knows precisely why the underclass seems to have come into existence so quickly, and no one knows what policies and programs will keep the group from becoming a permanent feature of American society. However, the Foundation and a number of its grantees have taken major steps to learn more about the conditions that give rise to the underclass and what can be done to combat them.

Building New Understanding
In the program so far, the Foundation has supported the development of an operational definition of the underclass; helped create a new project at Washington's Urban Institute to respond to the needs of policymakers who are studying this phenomenon; helped establish a new interdisciplinary committee of the Social Science Research Council to mobilize scholars to survey work on the underclass; supported field research by University of Chicago professor William Julius Wilson, who is perhaps the best known theorist and researcher on the problems of structural urban poverty; and provided grants to the Joint Center for Political Studies and the National Council of La Raza for policy analysis and information dissemination about persistent poverty and underclass conditions in the black and Hispanic communities.

We have also launched a fellowship and training program to support young scholars concerned with persistent poverty and the underclass. The program, conducted by the Social Science Research Council, will fund 15 research assistantships, five dissertation grants, and two postdoctoral grants in 1989, expanding to 30 research assistantships, 10 dissertation grants, and 4 postdoctoral grants in 1990.

Community Planning and Action

Community demonstration projects being planned or operating in six cities are designed to mobilize leaders from the public and private sectors both to build metropolitan consensus around an agenda for eradicating underclass conditions and to play an information-gathering, planning, and advocacy role for the adoption of effective policies and programs. The six cities are Boston, Cleveland, Denver, Oakland, San Antonio, and Washington, D.C. Some of the year’s milestones include:

* In Oakland, a report issued in February by the Urban Strategies Council, called *A Chance for Every Child*, received widespread media attention. The report identified vulnerable points in the poverty cycle at which support and intervention strategies could improve the lives of at-risk children and youth. It was followed in September by a “blueprint” report, *Changing the Odds: Expanding Early Childhood Development Programs for Oakland’s Low-Income Families*.

* The Washington project has issued reports on several topics, including employment and training programs, employment opportunities for persons with limited skills, characteristics employers look for in unskilled applicants, and what poor people think of earning their way out of poverty. Two “professional exchanges” were initiated to examine systems issues related to services for the poor, and the Washington Board of Trade has created a Presidential Task Force on Poverty that is mobilizing area employers to recruit and train residents with low skills.

* The Denver project has made especially strong connections to the city’s business, political, and social service network. The project has completed five published reports, including a statistical profile of persistent poverty, an analysis of existing youth services in Denver, and statewide surveys of welfare clients and workers.

The Boston, Cleveland, and San Antonio projects, still in their early stages, have hired staff directors and have begun early research activities.

This young woman and her daughter were featured in the Oakland Urban Strategies Council report *A Chance for Every Child*, issued in February. With help from an Oakland case manager, the young mother was able to finish high school and now attends a local college.
Adding a Community Development Dimension

Community Development Corporations (CDCs), which arose in the 1960s and now number about 1,000 throughout the United States, work from within poor neighborhoods and are directed by local residents, business people, and other community leaders. They undertake projects such as constructing and renovating apartments and houses, starting up businesses, and creating jobs. They build leaders, capital, and power in communities marked by a loss of all three.

At the close of the year, the Foundation's trustees approved a new initiative to support community development activities. The program will operate through national intermediary organizations that assist CDCs with low-rate loans, loan guarantees, grants, and technical assistance. The trustees also approved the Foundation's first "program-related investment," a low-rate, $5-million loan in 1989 to the Local Initiatives Support Corporation (LISC), the largest of the national intermediary organizations. Both LISC and the program-related investment strategy were created by the Ford Foundation and have been supported and adapted by a number of other foundations.

Basic Skills and Family Support

Another major social challenge in the United States is to find effective ways to integrate low-income families into society’s mainstream through better preparation for jobs and schooling and support for families. Since 1981, the Foundation has assisted community-based organizations in Atlanta, San Jose, Providence, and Washington, D.C., in a program that provides single mothers on welfare with job training, basic skills education, counseling, and child care. This Minority Female Single Parent (MFSP) program includes a rigorous evaluation conducted by Mathematica Policy Research to see whether the cluster of services can help the women find and keep full-time jobs that pay enough to make up for their loss of welfare benefits.

Support by the Foundation for operations in the four community projects has concluded, but follow-up and evaluation will continue through 1991. Only then will there be answers to the key issues in the evaluation: whether the participating women will find and keep jobs paying 30 percent more than the minimum wage, and how their families will be affected. What can be re-
The Mexican American Legal Defense and Educational Fund announces at a press conference its suit against the Los Angeles County Board of Supervisors. The organization received a “stabilization support” grant this year designed to reduce their dependence on foundation assistance.

ported now, however, are some of the factors that can cause serious problems in programs like these and some of the approaches that look promising:

* Employment-training programs for minority single mothers should have a clear focus on jobs as the motivating goal of participation;
* Remedial education should be integrated with occupational training simultaneously rather than sequentially;
* Participants should be given a range of skill training services from which to choose;
* Providing comprehensive services in a single “one-stop” program is desirable;
* Child care assistance should be comprehensive and flexible; and
* Program intake should minimize delays, preferably through open entry and open exit to training and education services, and create a warm, supportive environment that follows through job placement.

In addition to the MFSP, other efforts to strengthen basic skills and family support policies this year included support for a national conference on welfare reform; projects encouraging “intergenerational” approaches in human services that address the needs of parents and their children as a unit; and a project fostering improved child support guidelines and enforcement.

Protecting Basic Rights

In the past two years, the Foundation has pursued a new funding strategy with two organizations important in our long-standing program to secure and protect basic rights of America’s minorities: the NAACP Legal Defense and Educational Fund and the Lawyers’ Committee for Civil Rights Under Law. We have given these groups large “stabilization support” grants that decline over five years and that are being used to fund planning, fund-raising, and other activities intended to reduce their dependence on foundation assistance. This year a similar major appropriation was approved for the Mexican American Legal Defense and Educational Fund.

Although this new strategy accounts for much of the Foundation’s support in the area of protecting basic rights, appropriations were also made to the National Council of La Raza for public policy analysis on issues affecting Hispanics and to the employment litigation program of the NAACP Special Contribution Fund. The fund supports public interest employment litigation and affirmative action activities designed to overcome the effects of past discrimination and unfair labor practices.

In addition, smaller grants went to support such activities as an in-depth survey by the NAACP Legal Defense and Educational Fund of racial attitudes in America, the New York State Judicial Commission on Minorities, and “Eyes on the Prize—Part II,” a coming television series on the civil rights movement.
Other Interests and Initiatives  Although most of the Foundation’s work is done through its established programs, a special interests and explorations fund is used to support a very small number of projects of exceptional merit that do not fall within these programs.

The Foundation also operates the Bellagio Study and Conference Center on Northern Italy’s Lake Como, for international conferences and scholarly residencies.
Highlights of the Year

When the public television series "Eyes on the Prize" aired during the winter of 1987, this six-part documentary on black Americans' struggle for civil rights during the period 1954-65 attracted wide public attention and critical acclaim. Underwritten by grants from a wide range of public and private sources, it won more than 25 national and international awards and was rebroadcast early this year. The Foundation contributed toward the cost of educational materials used in conjunction with its subsequent distribution through schools, church and community groups, colleges, and universities.

Executive producer Henry Hampton is now taking on the much more demanding task of producing an eight-part sequel depicting the evolution of the civil rights struggle from 1965 to 1980. As he points out, the first civil rights decade, which reshaped the American South, "occurred at a time and in a place where injustice was palpable, where villains and victories were easy to define." The succeeding 15 years represent "a far more complex story, less celebratory...[in which] the 'morally correct' positions are often difficult to identify."

"Eyes on the Prize—Part II" is scheduled for PBS broadcast in 1990. Major supporters in 1988 included PBS and the Corporation for Public Broadcasting, the Lilly Endowment, and the Ford, MacArthur, and William Penn foundations. A 1988 Rockefeller Foundation appropriation is earmarked for the basic production, educational materials, and archive development for the 100,000 feet of historical film and videotape and the more recently videotaped and filmed interviews with key figures of the period.

"Eyes on the Prize," a critically acclaimed documentary on the history of the American civil rights movement, won more than 25 national and international awards. The Foundation is joining a group of funders to support "Eyes on the Prize II," scheduled for PBS broadcast in 1990. Here federal troops guard a group of black students as they enter a Little Rock, Arkansas, high school in September 1957.
Changing Gender Roles
In addition to continuing support for the Changing Gender Roles competitive grants program, funds have been included in the appropriation for an evaluation of this five-year-old effort, which has assisted 73 research projects examining the facts and consequences of the rapid changes that have occurred in postindustrial society in men and women's traditional work and family roles. The evaluation will include an independent assessment not only of the quality of the research completed, but also the prospects that this research will have significant effects in educational and policy arenas.

New York Public Education Fund
In 50 cities across the country over the past 10 years, independent tax-exempt organizations have been established to encourage support for their public schools and to foster public-private collaborative efforts enhancing the quality of local public education. These organizations, taking widely differing forms, enable cooperating foundation and corporate funders to work effectively with public education leaders in identifying and meeting school system needs in ways that complement public funding.

This year, with the arrival of a new chancellor of education for New York City and with school reform a current priority of local grantmakers, staff of the Rockefeller Foundation and the New York Community Trust began exploring the feasibility of a local initiative. By the year's end, the Fund for New York City Public Education was established with support from the Ford Foundation, the Aaron Diamond Foundation, and the Charles Hayden Foundation, as well as the Rockefeller Foundation and the New York Community Trust. While additional donors were being sought and a board of directors was being formed, an executive director was assembling a staff and administering the first two grants in support of school system projects, from the Samuel and May Rudin Foundation and the AT&T Foundation.
The Bellagio Study and Conference Center
The Foundation operates the Bellagio Study and Conference Center on Lake Como, Italy. During the year, the center was host to 24 conferences with a total of 545 participants from 66 countries. These conferences ranged from “Leadership in Bioethics” to “The Challenge of Simultaneous Economic Relations with the East and West” and from “Manuscripts and Literary History” to “Scientific Exploration of Aging.” In addition, 129 scholars and artists were in residence to work on a wide variety of month-long projects, including a series of landscape paintings, a biochemistry monograph, several novels, a book on medicinal and toxic plants of the northwest Amazon, a concerto for piano and chamber orchestra, and a political memoir. (An annual report describing the Bellagio Center in 1988 is available by contacting the Foundation.)

A Foundation staff committee is responsible for reviewing applications for conferences and residencies, which are then selected on a competitive basis. Conferences are scheduled for up to seven days; the number of participants, limited to 25, must include substantial international representation. The month-long residencies are intended for scholars and artists whose projects do not require laboratory or extensive library resources.

Other Projects and Programs Supported
Among the other Special Interests and Explorations grants and appropriations approved in 1988, support was provided for:

- A research unit being established in Zimbabwe by the Cold Comfort Farm Trust for economic and political analyses of events in South Africa for policymakers in southern Africa.
- Preparation and distribution of the final report of Duke University’s International Commission for Central American Recovery and Development, which has explored the problems confronting that region and assessed steps that could be taken regionally and internationally to create an economic and social environment in which peace could take root.
- The Synergos Institute and its program of mobilizing and documenting collaborative approaches at the local level to specific problems of poverty in the developing world and the United States.

International Program on Rice Biotechnology [1988—$1,400,000, in addition to 1987—$2,500,000]

**Centro Internacional de Agricultura Tropical, Cali, Colombia**

In support of a project to develop anther culture in its rice breeding program

$ 175,300

Foundation-administered project

**Program support expenses**

**International Rice Research Institute, Manila, Philippines**

Toward the costs of its wide hybridization program for rice improvement

273,200

To support collaborative research on the use of *Bacillus thuringiensis* toxin genes to control insect pests of rice

106,800

For research involving the application of molecular techniques in rice pathology

100,000

**Kansas State University, Manhattan**

For research on genes coding for inhibitors of rice weevil digestive enzymes

40,300

**Louisiana State University-Baton Rouge**

For research on the heritability of somaclonal variation in rice

47,250

**Philippine Rice Research Institute, Laguna**

To initiate international collaboration with scientists and laboratories in Japan and Thailand

13,600

**Plant Genetic Systems, Ghent, Belgium**

For collaborative research with the International Rice Research Institute on the use of *Bacillus thuringiensis* toxin genes to control insect pests of rice

160,000

**Salk Institute for Biological Studies, San Diego, California**

For research on the molecular mechanisms in rice that induce defense responses to microbial disease

359,100

**Texas A&M University System, College Station**

For use by the Texas Agricultural Experiment Station in conducting research on the measurement of genotypic variation in rice characteristics in rice

21,420

**University of California-Davis**

Toward the cost of research on the development of microinjection and liposome encapsulation techniques for the genetic transformation of rice

145,465

**University of Georgia Research Foundation, Athens**

For research by the university on transposable elements and molecular characterization of phenotypic and genomic instability in rice

71,480

**University of Nottingham, England**

For research on rice protoplasts for plant regeneration and genetic manipulation

146,000

**University of Tsukuba, Japan**

For research on the genetic transformation of rice

150,000

**University of Wisconsin-Madison**

Toward the cost of research on the genome organization of *Pyricularia oryzae*, the causal organism of blast disease in rice

50,000

**Yale University, New Haven, Connecticut**

Toward the costs of research on the isolation and characterization of rice genes for carotenoid biosynthesis

174,160

**International Rice Research Institute, Manila, Philippines**

Toward the costs of the second international symposium on genetic manipulation in crops

30,000

Toward the costs of an international symposium and workshop on biological nitrogen fixation associated with rice production and rice culture

15,100

1988 Annual Report
Agricultural Sciences Grants (continued)

Grants in 1988

Li Liangcai, Institute of Genetics, Academia Sinica, Beijing, China $ 1,450
To enable him to participate in an international conference related to his work in rice biotechnology

Ling Ding-hou, South China Institute of Botany, Academia Sinica, Guangzhou, China 6,400
To enable him to participate in international conferences related to his work in rice biotechnology

Panos Institute, Alexandria, Virginia 36,000
To prepare an introductory dossier on biotechnology and sustainable development for distribution in developing countries (Joint grant with Health Sciences, Population Sciences, and Special Programming, for a total of $92,000)

Priorities for Rice Biotechnology [1986—$225,000]

Brown University, Providence, Rhode Island 89,500
For use by its World Hunger Program in preparing an overview of biotechnological choices and opportunities for developing countries

Foundation-administered project
Program support expenses

Resources Development Foundation, Washington, D.C. 12,500
Toward the cost of its international biotechnology program (Joint grant with Health Sciences and Special Programming, for a total of $50,000)

Studies on the Impact of Agricultural Technical Change [1988—$400,000, in addition to 1986—$1,200,000]

Chen Dabai, Institute of Agricultural Economics, Beijing, China 15,560
To complete his Ph.D. dissertation in agricultural economics

Development Institute, Research Center for Rural Development of the State Council of China, Beijing 125,000
To conduct a study, "Differential Impact of Modern Rice Technology in Favorable and Unfavorable Production Environments and Limited Rural Factor Markets in China."

Foundation-administered project
Development of proposals for studies that would incorporate externalities in the evaluation of agricultural technologies

International Rice Research Institute, Manila, Philippines 91,700
For a cooperative study with Montana State University on environmental costs of agricultural chemical use in Southeast Asian rice production

For a study of the differential impact of modern rice technology on favorable and unfavorable production environments in Tamil Nadu, India 40,000

Montana State University, Bozeman 68,400
For a cooperative study with the International Rice Research Institute on environmental costs of agricultural chemical use in Southeast Asian rice production

Stanford University, California 21,750
For use by John H. Barton, professor of law, for an analysis of the regulatory and intellectual property issues significant to developing countries' plant biotechnology research

University of Georgia Research Foundation, Athens 75,080
For use by the university toward the costs of research on the cellular and molecular biology of apomictic Pennisetum species and interspecific hybrids

University of Zimbabwe, Harare 24,000
For training workshops in advanced biology

© 2003 The Rockefeller Foundation
Improving Family Food Production Systems in Africa

**American Farmland Trust, Washington, D.C.**

$15,000

To assist the African Development Bank in expanding the role of borrowing-country nongovernmental organizations in policy dialogue and project implementation related to activities funded by the bank.

**Association of Faculties of Agriculture in Africa, Rabat, Morocco**

15,000

For a workshop to explore issues surrounding genetics and genetic engineering and the effective incorporation of these subjects into college curriculums and extension work.

**David Phiri Chimimba, University of Malawi, Lilongwe**

10,000

To assist the costs of a study, "State Intervention and Agricultural Development in Malawi: An Economic Analysis of the Marketing and Pricing Policy."

**Cornell University, Ithaca, New York**

$14,800

For use by Martin Meltzer, doctoral candidate from Zimbabwe, toward the costs of field research for a study, focused on Zimbabwe, of the economic benefits of livestock biotechnology.

**Foundation-administered project**

17,100

Toward the costs of developing a summer institute on African agricultural research for African doctoral students enrolled in US universities.

**International Food Policy Research Institute, Washington, D.C. [1988-$400,000]**

400,000

To improve Zimbabwe’s capacity to evaluate the performance of different irrigation systems and determine the likely effect on those of modified management and design.

**International Laboratory for Research on Animal Diseases (ILRAD), Nairobi, Kenya [1988-$715,000]**

715,000

Toward the costs of initiating a project relevant to the development and application of vaccines for animal diseases in Africa.

**Makerere University, Kampala, Uganda [1988-$200,000]**

200,000

To enable researchers at the university and the Ministry of Agriculture to work together on a joint project to improve banana-based cropping systems.

**Maze Research in Malawi [1988-$625,000]**

To strengthen the capacity of Malawian to design and conduct a maize research program that addresses the needs of smallholders. (Grants will be made in subsequent years.)

**Kay Muir-Leresche, University of Zimbabwe, Harare**

6,000

Toward the costs of research for a project on comparative advantage as a basis for price policy in Zimbabwe.

**Social Science Research Council, New York, New York [1988-$400,000]**

400,000

To advance understanding of the factors affecting agricultural performance in Africa, and to stimulate collaborative interdisciplinary research between US and African scholars in the process.

**University of Botswana, Gaborone**

40,000

Toward the costs of a project to investigate income and employment generation in rural Botswana.

**University of Wisconsin Madision [1988-$380,000]**

To provide academic enrichment to African graduate students enrolled in agricultural programs in United States universities with a view to improving the quality and relevance to African development of their doctoral research. (Grants will be made in subsequent years.)

**University of Zimbabwe, Harare**

50,000

For a maize pathology project.

Toward the costs of a research project on rural food security in Zimbabwe.
Enhancing International Agricultural Research Collaboration

Agricultural Economics Society of Southeast Asia, Manila, Philippines
Toward the costs of its seventh biennial meeting
$ 25,000

Mehmet Bulbul, University of Ankara, Turkey
To enable him to participate in the 1988 International Conference on Dryland Farming, Amarillo/Bushland, Texas
4,900

Foundation-administered projects
Preparation of reports by the Bellagio Forestry Task Force and expenses involved in a Bellagio conference on strategies for addressing research needs in tropical forestry
100,000
Preparation of a report on nongovernmental, nonacademic organizations concerned with problems of environmental degradation in developing countries
25,000

Institute of International Development and Education in Agriculture and Life Sciences, Beltsville, Maryland
In support of an agricultural science symposium between China and Taiwan
40,000

Inter American Institute for Cooperation on Agriculture, San Jose, Costa Rica
Toward the costs of a meeting on decentralizing specific wheat research and training activities in Latin America sponsored by the Consultative Group on International Agricultural Research
7,000

International Federation of Agricultural Producers, Paris, France
Toward the costs of participation by representatives from developing countries in the 1988 Seminar and World Farmers’ Congress held in Adelaide, Australia, in May
10,000

International Food Policy Research Institute, Washington, D.C.
For a study of population change in the wake of agricultural improvement (Joint grant with Population Sciences, for a total of $61,470.)
30,730

International Fund for Agricultural Research, Arlington, Virginia
Toward the costs of an overview study, “Tropical Forests and Crop Genetic Resources”
50,000

Missouri Botanical Garden, St. Louis (1988—$300,000)
To initiate the formation of a Latin American plant sciences network to expand graduate training opportunities, stimulate research in new disciplines, and promote intraregional collaboration
300,000

Resources for the Future, Washington, D.C.
Toward the development of the International Policy Council on Agriculture and Trade
50,000

Rutgers University, New Brunswick, New Jersey
In support of participation by representatives from developing countries in an agricultural technology management workshop held at Rutgers July 6-8, 1988
15,000
For a workshop, “Markets for Vegetables in the Western Hemisphere Trends, Policies, and Linkages”
12,000

Soil Fertility in Africa (1988—$600,000)
International Fertilizer Development Center, Muscle Shoals, Alabama
Toward costs of the project “African Agriculture: Crisis and Transformation”
360,000
North Carolina State University, Raleigh
Toward a workshop and training project on African soil management
100,000

</table>
Harvard University, Cambridge, Massachusetts
Toward support of a research project entitled “A China-U.S. Partnership for Training and Research on Schistosomiasis and Filariasis.”

Institut Pasteur, Lille, France
For a research and training project to develop a vaccine for schistosomiasis.

Institut Pasteur, Paris, France
Toward support of a research and training project to study the immunological and epidemiological aspects of malaria.

New England Medical Center Hospitals, Boston, Massachusetts
For a research and training project to investigate aspects of diarrheal diseases in India.

New York University, New York
Toward support of a research and training project to integrate studies on malaria and Chagas’ disease.

Oxford University, England
For a research and training project on clinical, pathophysiological, and genetic aspects of *P. falciparum* malaria in Melanesia.

Stanford University, California
Toward support of a research project entitled “The Application of Biotechnology to the Enteric Infections of Childhood.”

University of California-Los Angeles
For a research and training project to investigate problems of diagnosis, epidemiology, and classification of parasitic protozoa, as in Chagas’ disease.

University of California-San Francisco
For a research and training project to develop a malaria drug and examine *Plasmodium* resistance.

University of Edinburgh, Scotland
For a research and training project on the immunological and epidemiological aspects of malaria.

University of Rome, Italy
For a research and training project to develop effective methods of malaria control in Africa.

University of Stockholm, Sweden
For a research and training project to develop a malaria vaccine.

University of Uppsala, Sweden
For a research and training project to study genetic aspects of Chagas’ disease parasites.

Walter and Eliza Hall Institute of Medical Research, Melbourne, Australia
For collaborative research on schistosomiasis surveillance and control.

International Health and Biomedicine, Norman, Oklahoma
Toward the costs of research and development of a book and three films for television on medical problems in the developing world with a focus on vaccine development and plans to immunize the world’s children.

Mahidol University, Bangkok, Thailand
Toward the development of the Division of Parasite Biochemistry in its Department of Biochemistry, Faculty of Science.

Max Planck Institute for Immunobiology, Freiburg-Zahringen, West Germany
For a research project on cellular immunity in malaria.

National University of Singapore
Toward the costs of the first Asia-Pacific Congress of Medical Virology, held in Singapore November 6-11, 1988.
Pan American Health Organization (PAHO), Washington, D.C.
[1988—$300,000] To foster competence in basic and applied biotechnology in Latin America

- Toward the costs of a conference on dengue held in Havana, Cuba
- Panos Institute, Alexandria, Virginia
- To prepare an introductory dossier on biotechnology and sustainable development for distribution in developing countries (Joint grant with Agricultural Sciences, Population Sciences, and Special Programming, for a total of $92,000)

Queensland Institute of Technology, Brisbane, Australia
- For research on the antigenic properties of dengue viruses

Resources Development Foundation, Washington, D.C.
- Toward the cost of its international biotechnology program (Joint grant with Agricultural Sciences and Special Programming, for a total of $50,000)

Rockefeller University, New York, New York
[1988—$300,000] To foster a new initiative in malaria prophylaxis and therapy through a consortium of medical biochemists working with molecular biologists and immunologists

Alan Sher, National Institutes of Health, Bethesda, Maryland
- Toward the costs of organizing a conference on complement-parasite interactions

Transfer of Viral Vaccine Production Technology to Developing Countries

- Ministry of Health of China, Beijing, China
  - Toward the cost of phase one safety and immunogenicity studies on the 14-14 2 strain of Japanese encephalitis

- University of Quebec, Canada
  - For use by its Institut Armand Frappier in transferring to Colombia new technology for manufacturing rabies vaccine
  - Grant in aid for the same purpose
  - For the purchase of equipment for vaccine production and quality control facilities in Colombia

- University of Georgia, Athens
  - Toward the costs of developing oral vaccination techniques for wildlife rabies

- University of London, England
  - Toward the costs of a study of bancroftian filariasis in southern India

- University of Missouri-Columbia
  - Toward the costs of a research project on molecular approaches to germ line determination in Ascans lumbncoides

- University of Stockholm, Sweden
  - Toward the costs of a research project on Plasmodium falciparum antigens relevant to the development of a malaria vaccine

- Kerr L. White, Stanardsville, Virginia
  - Toward the costs of preparing a monograph on the history of the International Cholera Epidemiology Network

World Health Organization, Geneva, Switzerland
[1988—$300,000] To conduct applied research to improve the potency of and reduce the costs of delivering vaccines (Joint grant with Population Sciences, for a total of $300,000)

[1985—$1,000,000] For its new special program on vaccine development

- Toward the costs of a workshop, “Manpower Development in Vector Biology and Control”

Yale University, New Haven, Connecticut
- Toward a research project on the molecular epidemiology of dengue viruses
Enhancing National Capability for Population-Based Health Care

Cambridge University, England
Toward the costs of preparing a book entitled *A History of Public Health Education, Britain and the United States Compared* $50,000

Centers for Disease Control, Atlanta, Georgia
Toward the costs of a study of the pathophysiology of dengue hemorrhagic fever $25,000

Centre for Development and Population Activities (CEDPA), Washington, D.C.
Toward the costs of a regional conference of women leaders on "Options for a Better Life for Young Women" in Nairobi, Kenya, January 1989 $10,000

Chulalongkorn University, Bangkok, Thailand
Toward support of a master's degree program in health development $21,600

Educational Commission for Foreign Medical Graduates, Philadelphia, Pennsylvania
Toward the costs of publishing and distributing a directory of the international activities of U.S. schools of medicine, dentistry, pharmacy, and public health $15,000

Emory University, Atlanta, Georgia
Toward the costs of the Public Health Fellows Summer Program for Black and Other Minority College Students (Joint grant with Equal Opportunity for a total of $60,000) $30,000

Family Care International, New York, New York
Toward the costs of preparing and producing case studies for the series of Safe Motherhood Initiative regional workshops $35,000

Foundation-administered projects

Conference on nursing education held in Africa July 11-13, 1988, to explore the potential for a network involving American colleges of nursing and African midwifery schools $24,600

Meeting on "Medical Education and Cost-Effective Health Care" held at Bellagio March 21-25, 1988 $45,000

Meeting on nursing education and the potential of a network between American colleges of nursing and midwifery schools in Africa, July 1988 $26,650

Meeting to plan conferences in Africa on Women for Women's Health $4,400

Purchase of microform libraries for medical schools and research units in the developing world $5,568

Purchase of reader-printers for four medical school libraries in Indonesia, Egypt, Mexico, and Colombia $28,000

Travel and in-transit expenses of participants in a Foundation-sponsored Bellagio conference on hookworm disease, September 1988 $30,000

Travel expenses of a Foundation-sponsored commission investigating sites for the Foundation program on control of the mosquito vector *Aedes aegypti* $20,000

Government of Tamilnadu, India
Toward the costs of a pilot project for training of medical officers to reduce the maternal mortality in the state $35,000

Harvard University, Cambridge, Massachusetts
For a planning project to focus social science research on the "health transition" $99,500

For support of a study, "Costs of Ambulatory Surgery in Cali, Colombia" $30,800

Toward the costs of a collaborative and exchange program on the Chinese psychiatric care system established between the Department of Social Medicine and Health Policy, Harvard Medical School, and the Chinese Ministry of Public Welfare $20,000

Toward the costs of "Project 88: A Survey on Respiratory Infections in Mactan, the Philippines" $8,000

Information Systems for Developing-Country Ministries of Health [1987—$300,000]

Foundation-administered project $50,000

Management and evaluation costs of the program to provide five selected ministries of health in the developing world with access to the core literature in public health, medicine, and related disciplines

1998 Annual Report 51
International Center for Research on Women, Washington, D.C.
Toward preparation of book on women's work and child welfare in the developing world
$5,000

International Clinical Epidemiology Network (INCLEN)
[1988—$1,400,000, in addition to 1987—$1,050,000]
Chulalongkorn University, Bangkok, Thailand
Toward continuing support of its Clinical Epidemiology Unit
25,000

Escola Paulista de Medicina, Sao Paulo, Brazil
Toward support of a collaborative study on Streptococcus pneumoniae as a cause of moderate and severe respiratory disease in Brazilian children
19,700
In support of research in clinical epidemiology
10,000

Foundation-administered projects
Toward the costs of the seventh annual meeting of INCLEN, to be held in Goa, India, January 1989
150,000
Costs of INCLEN interchange activities
100,000

Gadjah Mada University, Yogyakarta, Indonesia
Toward continuing support of its Clinical Epidemiology Unit
25,000

Hospital General de Mexico, Mexico City
Toward continuing support of its Clinical Epidemiology Unit
25,000
In support of research in clinical epidemiology
5,000

Johns Hopkins University, Baltimore, Maryland
To provide faculty advice and consultancy aimed at strengthening the training of INCLEN fellows, and to provide long-term support for research and teaching at the network's clinical epidemiology units
65,900
In support of an INCLEN multicenter evaluation of clinical signs as indicators of lower respiratory tract infection in children
38,600

Khon Kaen University, Thailand
Toward continuing support of its Clinical Epidemiology Unit
25,000
In support of research in clinical epidemiology
5,000

Mahidol University, Bangkok, Thailand
Toward continuing support of its Clinical Epidemiology Unit
25,000

McMaster University, Hamilton, Canada
Toward the costs of an INCLEN mini-library of educational materials and an INCLEN newsletter
33,600

Pontificia Universidad Javeriana, Bogota, Colombia
In support of research in clinical epidemiology
10,000

Shanghai Medical University, China
Toward continuing support of its Clinical Epidemiology Unit
25,000
In support of research in clinical epidemiology
5,000

Suez Canal University, Ismailia, Egypt
Toward continuing support of its Clinical Epidemiology Unit
25,000
In support of research in clinical epidemiology
5,000

Universidad de La Frontera, Temuco, Chile
Toward continuing support of its Clinical Epidemiology Unit
25,000

University of Nairobi, Kenya
Toward continuing support of its Clinical Epidemiology Unit
25,000

</tbody>
</table>
The Netherlands Society of Tropical Medicine, Amsterdam
Toward the costs of travel for Third World scientists participating in the 12th International Congress for Tropical Medicine and Malaria

$25,000

People-to-People Foundation (Project Hope), Millwood, Virginia
For an educational research program in pediatric critical care in Indonesia

$50,000

Pew Charitable Trusts/Rockefeller Foundation Health of the Public Program

[1988—$1,000,000, in addition to 1987—$900,000]

University of California–San Francisco
Toward the support of programs of public health care at the University of Washington, the University of New Mexico, and Columbia University

$1,000,000

For costs of managing the program

$71,850

Rutgers University, New Brunswick, New Jersey
Toward support of an analysis of data compiled on the use of the Selective Medical Libraries on Microfiche (SMLM) in Egypt, Indonesia, Mexico, and Colombia

$7,000

Brooke Schoepf, Woods Hole, Massachusetts
In support of a research project on control of AIDS in Zaire at the Centre de Recherche en Sciences Humaines, Kinshasa

$50,000

Task Force for Child Survival, Atlanta, Georgia [1988—$250,000]
To provide the Ugandan Ministry of Health with technical assistance in reestablishing the country's primary health care system

$250,000

University of California–San Francisco
In support of a planning grant for a collaborative study with Makerere University of heterosexual transmission of AIDS in Africa

$26,250

University of Hawaii at Manoa
In support of the Pacific Basin Medical Officer Training Program

$5,220

University of North Carolina at Chapel Hill
[1988—$950,000] Toward establishing a clinical epidemiology resource and training center (CERTC) in its school of medicine

$950,000

Toward support of a conference on nurse-midwifery and women's organizations for health

$89,000

University of Pennsylvania, Philadelphia [1988—$950,000]
Toward the costs of training candidates from developing countries in clinical epidemiology

$950,000

University of Wisconsin–Madison
In support of its project on epidemiologic surveillance and health manpower training in the Lao People's Republic

$50,000

World Bank, Washington, D.C.
Toward the costs of its review of "Health Sector Priorities in the Developing World" (Joint grant with Special Programming, for a total of $50,000)

$40,000

World Health Organization, Geneva, Switzerland
[1988—$300,000] To improve the health status of the very poor, especially women and children, through demonstration projects in Indonesia, Gambia, Egypt, and Zambia that foster cooperation among national health, education, and agriculture ministries

$300,000

For the development of a database for adolescent health indicators and the holding of two workshops in Africa on adolescent health

$48,000

Toward the costs of publishing a health systems newsletter

$60,000
### Grants in 1988

**Cooperative Initiatives in Health and Population**

- **African Fertility Society, Nairobi, Kenya**
  - $13,500
  - To compile information on AIDS research projects in Africa (Joint grant with Population Sciences, for a total of $27,150)

- **Luis Rosero Bixby, University of Michigan, Ann Arbor**
  - $8,000
  - Toward the costs of a research project on the effect of fertility decline upon infant mortality in Costa Rica (Joint grant with Population Sciences, for a total of $16,000)

- **Foundation-administered project**
  - Conference held in April on how to reduce rates of morbidity and mortality and effect a "health transition" in developing countries (Joint grant with Population Sciences, for a total of $60,000)

- **Harvard University, Cambridge, Massachusetts [1988—$330,000]**
  - $165,000
  - To help the School of Public Health establish an international scientific network on AIDS and reproductive health (Joint grant with Population Sciences, for a total of $330,000)

- **International Women’s Health Coalition, New York, New York [1988—$300,000]**
  - $150,000
  - To extend its reproductive health program to selected countries of sub-Saharan Africa (Joint grant with Population Sciences, for a total of $300,000)

- **Program for Appropriate Technology in Health (PATH), Seattle, Washington**
  - $27,400
  - For the development of a dipstick assay for HIV screening in the developing world (Joint grant with Population Sciences, for a total of $100,000)

- **Rand Corporation, Santa Monica, California**
  - $35,000
  - Toward the costs of a study on birth spacing and maternal and child health using longitudinal data from Malaysia and Guatemala (Joint grant with Population Sciences, for a total of $80,000)

**Fellowships**

- **Biotechnology Career Fellowships [1988—$400,000]**
  - $48,067

---

1988 Annual Report 55

© 2003 The Rockefeller Foundation
Brackets show the years and original amounts of appropriations from which grants have been made. Appropriations may be made entirely to a single institution or they may be allocated to a number of recipients. Such allocations may be made over a period of years until the appropriation is expended. Listings without brackets are grants-in-aid, each of which is made to a single recipient for $100,000 or less

**Grants in 1988**

### Developing Technology for Fertility Regulation

#### Frank Alvarez-Sanchez, Asociacion Dominicana Pro-Bienestar de la Familia, Inc., Santo Domingo, Dominican Republic
- To complete research on endocrine profiles of women using NORPLANT contraceptive implants

#### Chinese Academy of Sciences, Beijing
- $1,250,000
  - To assist the academy's plan for strengthening research in reproductive and developmental biology in the system of institutes it administers
  - For use by the Zhejiang Academy of Medicine for three projects concerning the development of spermicides

#### Federal University of Bahia, Salvador, Brazil
- $300,000
  - For research and training in reproductive biology

#### Georgetown University, Washington, D.C.
- $21,910
  - For research on monoclonal antibodies against epididymal epithelial cells

#### Harvard University, Cambridge, Massachusetts
- $46,280
  - For a study at its Center for Population Studies on the relationship between body fat and estrogen metabolism
  - For a colloquium to be held in honor of Robert H. Ebert and his role in establishing joint M.D.-Ph.D. programs

#### Instituto de Biologia y Medicina Experimental, Buenos Aires, Argentina
- $25,000
  - For further research on immunological approaches to male contraception

#### Instituto Nacional de la Nutricion Salvador Zubiran, Mexico City
- $12,500
  - For a meeting of Latin American scientists studying human reproduction

#### Johns Hopkins University, Baltimore, Maryland
- $100,000
  - For a study of the histological and physiological regulation of the corpus luteum

#### Kenya Medical Research Institute, Nairobi
- $13,130
  - For a laboratory and clinical evaluation of a traditional contraceptive medicine of plant origin

#### Latin American Population Sciences Network
- $1,200,000
  - To expand training, research, and intraregional collaboration in reproductive biomedicine and family planning in Latin America (Grants will be made in subsequent years)

#### Marine Biological Laboratory, Woods Hole, Massachusetts
- $100,000
  - In support of its course in embryology

#### Oregon State University, Corvallis, Oregon
- $43,940
  - For a study of the mechanism of attachment of very early embryos to the maternal uterine lining

#### Panos Institute, Alexandria, Virginia
- $23,000
  - To prepare an introductory dossier on biotechnology and sustainable development for distribution in developing countries (Joint grant with Agricultural Sciences, Health Sciences, and Special Programming, for a total of $92,000)

#### Population Council, New York, New York
- $50,000
  - For study of a sperm immobilizing factor found in human serum
  - For research on human antisperm antibodies and the development of an antisperm vaccine
  - For research on a potential contraceptive vaccine based on beta-hCG synthesized in bacteria
Alexandra Psychoyos, Laboratory of Reproductive Physiology, National Center of Scientific Research, Bicêtre, France $50,000
For a study of the effects of antiprogestins, particularly the compound RU 486, on various preovulatory and preimplantation phenomena

Research and Training in the Population Sciences in Sub-Saharan Africa
[1988—$1,500,000, in addition to 1987—$1,300,000]

National Museums of Kenya, Nairobi $25,110
For use by its Institute of Primate Research to enable Mohamed Isahakia to study the development and application of antisperm monoclonal antibodies

Research on Topics Related to the Clinical Applications of Gossypol
[1988—$400,000, in addition to 1987—$300,000]

Rockefeller University, New York, New York $31,000
For research on the interaction of gossypol with proteins for Spassula and bull sperm

Chinese Academy of Sciences, Beijing $25,000
For further research on human sperm membrane proteins at the Shanghai Institute of Cell Biology

Federal University of Bahia, Salvador, Brazil $25,000
For a study to be undertaken at its Maternidad Clínica de Oliveira to measure estrogen and progesterone receptor deficiency in the endometrial tissue of infertile women

Instituto de Biologia y Medicina Experimental, Buenos Aires, Argentina $25,000
For a study of factors from human follicular fluid which affect follicular maturation and the capacitation of spermatozoa

Salk Institute for Biological Studies, San Diego, California $21,700
For research on oocyte meiosis inhibitor

South-to-South Cooperation in the Population Sciences and Reproductive Health
[1988—$1,000,000, in addition to 1986—$1,000,000]

(COPIR 2003 The Rockefeller Foundation)
Population Sciences Grants (continued)

Grants in 1988

Assiut University, Egypt
To enable its faculty of medicine to participate in an international multicentered study to develop a vaginal contraceptive pill

$25,740

Asociacion Dominicana Pro-Bienestar de la Familia, Inc., Santo Domingo, Dominican Republic
For participation in an international multicentered study using a low dose of gossypol as a male contraceptive

$29,310

For participation in an international multicentered study to develop a vaginal contraceptive pill

$25,130

Centro de Pesquisa e Assistencia em Reproducao Humana, Salvador, Brazil
To coordinate and participate in an international multicentered study to develop a vaginal contraceptive pill

$101,500

For participation in an international multicentered study using a low dose of gossypol as a male contraceptive

$33,760

Chulalongkorn University, Bangkok, Thailand
To enable the Department of Obstetrics and Gynecology to undertake a study on the acceptability of gossypol-lubricated condoms among prostitutes in Bangkok

$4,540

Foundation-administered project
Organizational costs, meetings, and consultants

$100,000

National Museums of Kenya, Nairobi
To enable the Institute of Primate Research to study in baboons a contraceptive vaccine developed by the National Institute of Immunology, New Delhi, India

$30,250

University of Nairobi, Kenya
To enable its Department of Obstetrics and Gynecology to participate in an international multicentered study to develop a vaginal contraceptive pill

$63,300

To enable its Department of Community Health to undertake a study on the acceptability of gossypol-lubricated condoms among prostitutes in Nairobi

$5,570

University of Zambia, Lusaka
To enable its Department of Obstetrics and Gynecology to participate in an international multicentered study to develop a vaginal contraceptive pill

$36,400

Technion-Israel Institute of Technology, Haifa, Israel
For a study on uterine angiogenesis factor, to be conducted at its faculty of medicine

$29,000

Universidad Nacional de Cuyo, Mendoza, Argentina
For research on factors affecting the maturation and motility of spermatozoa, to be conducted at the Institute of Histology and Embryology

$910

University of Chile, Santiago
For research on the effect on the human corpus luteum of growth factors secreted by ovarian cells

$60,000

World Health Organization, Geneva, Switzerland [1988—$500,000]
To conduct applied research to improve the delivery and reduce the costs of all vaccines
(Joint grant with Health Sciences, for a total of $500,000)

$250,000

Improving Population Policies and Programs

Alan Guttmacher Institute, New York, New York
Toward the costs of updating the information included in its publication Induced Abortion—A World Review (Joint grant with Special Interests and Explorations, for a total of $70,000)

$35,000

For the publication of the 20th anniversary edition of its journal Family Planning Perspectives

$10,000

American Academy of Arts and Sciences, Cambridge, Massachusetts
Toward the costs of a conference and publications entitled "The Genetic Revolution: Scientific Prospects and Public Perceptions" (Joint grant with Agricultural Sciences, Health Sciences, and Special Programming, for a total of $40,000)

$10,000

Population Sciences Grants (continued)

Grants in 1988

Makerere University, Kampala, Uganda
To strengthen its population research and training program
$283,050

Nigerian Institute of Social and Economic Research, Ibadan
For a study of the determinants of female migration to urban centers in Nigeria
40,280

V G. Ntvereboh and S. P.C. Moyo, University of Zambia, and M. M. Mufwaya, Ministry of Health, Lusaka, Zambia
To study Zambian attitudes toward supplying family planning services to adolescents and unmarried persons
35,260

Gbolahan A. Ohi, Department of Epidemiology and Community Health, University of Ilonn, Nigeria, and James McCarthy, Department of Population Dynamics, Johns Hopkins University, Baltimore, Maryland
For a study of the determinants of fertility in Ilonn
44,130

Sahel Institute, Banako, Mali
For graduate fellowships to enable scholars from the Sahel region to study population and development abroad
350,000

For a study of the effects of drought on population dynamics in the Senegal river valley
50,000

A. Soyibo and T. A. Oyeyide, Department of Economics, and B. F. Iyun, Department of Geography, University of Ibadan, Nigeria
To evaluate the effects of agricultural development projects on the status of rural women in Oyo and Ekiti-Akoko, Nigeria
50,870

E. O. Udjo, Department of Sociology and Anthropology, University of Maidugun, Nigeria
For a study of trends in the determinants of fertility in a northern Nigerian community
25,800

Union for African Population Studies, Dakar, Senegal
For programs designed to foster collaboration between African experts in population and assist in the formulation of effective population policies for the region
150,000

University of Dar es Salaam, Tanzania
For an African regional training program in reproductive epidemiology
71,760
For a meeting to be held in Tanzania for population scholars based in universities in eastern and southern Africa
40,000

University of Kinshasa, Zaire
For a study of the interrelationships between employment, education, and fertility in urban Zaire
52,540
For a symposium entitled "Population Policy in Sub-Saharan Africa: Drawing on International Experience"
30,000

University of Nairobi, Kenya
To establish a microcomputer laboratory at its Population Studies and Research Institute
145,000
For an African regional training program in reproductive health
52,770

University of Zimbabwe, Harare
For graduate training in population studies at its Department of Sociology
123,620

Research on the Evaluation of Family Planning Programs in Developing Countries
[1987—$500,000]

Foundation-administered project
Program support costs
$60,000

Gujarat Institute of Area Planning, Ahmedabad, India
For research on program effort and performance of family planning services in the state of Gujarat
62,320

University of Dhaka, Bangladesh
For a study of program effort and performance of family planning in Bangladesh
17,000

© 2003 The Rockefeller Foundation
Research on the Relationship between the Status of Women in Developing Countries and Fertility [1988—$500,000, in addition to 1987—$500,000]

Bruce Christenson, University of Michigan, Ann Arbor $17,130
For a study of the relationship between women's status, fertility, and female labor force activity in Mexico

Foundation-administered projects
Publications, consultancies, and program support costs of the program 35,000
Workshops and meetings 65,000

Brigida Garcia and Orlandia de Oliveira, El Colegio de Mexico, Mexico City $52,100
For a study of the interrelationships between fertility, education, employment, and women's subordination in Mexico

Hill Gates, Department of Sociology and Anthropology, Central Michigan University, Mount Pleasant $9,850
For a comparative study of fertility and women's capital in Taiwan and Sichuan, China

Institute for Resource Development, Columbus, Maryland $12,000
To include a women's employment module in the questionnaires to be used in three developing countries participating in the demographic and health surveys program

Summeen Mahmud, Sharifa Begum, M. A. Mannan, and Kazi J. Hossain, Bangladesh Institute of Development Studies, Dhaka $49,600
To study how the status and fertility of Bangladeshi women are affected by their participation in income-earning projects

Anne R. Pehlery, Princeton University, New Jersey; Sajeda Amin, Dhaka, Bangladesh; and Jane Menken, University of Pennsylvania, Philadelphia $46,000
For a study of the relationship between women's status, health, and nutrition in Bangladesh

Pennsylvania State University, University Park $97,400
For a study of community variations in women's status and fertility in Colombia

Dudley Poston, Jr, Cornell University, Ithaca, New York; and Han-Gon Kim, Yeongnam University, Gyongnam, Republic of Korea $40,000
For a study of women's status and fertility in the Republic of Korea

Zeba A. Sathar, Pakistan Institute of Development Economics, Islamabad $18,800
To measure changes in women's status and fertility in Karachi

Ruth Simmons, University of Michigan, Ann Arbor, and Rezina Mita, International Centre for Diarrheal Disease Research, Dhaka, Bangladesh $35,000
For a study of the effects of a family planning program in rural South Asia on women's status

Abbas Tashakkor, Shiraz University, Iran; and Varda D. Thompson, Carolina Population Center, University of North Carolina at Chapel Hill $33,200
For a study of how the Islamic revolution has changed Iranian adolescents' attitudes regarding marriage, fertility, and the status of women

University of Michigan, Ann Arbor $99,700
For a study of women's status and fertility in five Asian countries

University of Washington, Seattle $39,500
For a study of development, the status of women, and fertility in Iran
Research Support for Population Scientists in Reproductive Biology and Policy Studies Returning to Developing Countries

(Other grants from this appropriation are listed under the division's first guideline, Developing Technology for Fertility Regulation)

Peking University, Beijing, China
For a study of population problems and the two-child policy in rural China $25,000
For research on the determinants of fertility in China, to be conducted in the Department of Sociology 21,940

Rutgers University, New Brunswick, New Jersey
For a project to study reproductive rights law and policy 8,000

South-to-South Cooperation in the Population Sciences and Reproductive Health

(Other grants from this appropriation are listed under the division's first guideline, Developing Technology for Fertility Regulation, and the Cooperative Initiatives guideline)

University of Lagos, Nigeria
To enable its Department of Obstetrics and Gynaecology to participate in an international study to quantify the health benefits of contraceptive counseling for young women at risk of repeated abortions 25,700

University of Nairobi, Kenya
For its Department of Obstetrics and Gynaecology to participate in an international study to quantify the health benefits of contraceptive counseling for young women at risk of repeated abortions 100,000

University of Zambia, Lusaka
To participate in an international multicentered study to quantify the health benefits of contraceptive counseling for young women at risk of repeated abortions 25,400

Universidad Externado de Colombia, Bogota
For a study of the knowledge and attitudes of Colombian teenagers toward contraception and family size 50,000

University of California-Berkeley
For a study of the societal costs associated with the birth of children in developing countries 20,000

University of Michigan, Ann Arbor
For a symposium on politics and population policies in developing countries 60,000

University of Pennsylvania, Philadelphia [1988—$450,000]
For a training and research program in African demography 450,000

University of Southern California, University Park
For a study of the effects on Latin American audiences of a Mexican television soap opera promoting family planning 70,000

Wuhan University, China
For a study of the interrelations among migration, fertility, and economic change in Hubei Province 49,880
Cooperative Initiatives in Health and Population

AIDS Initiatives in Africa [1988—$450,000]

To identify factors that intensify heterosexual transmission of human immunodeficiency virus (HIV) in Africa, interventions that can be effective there in preventing transmission, and mechanisms for communicating project results to policymakers and program managers. (Joint appropriation with Health Sciences, for a total of $750,000. Grants will be made in subsequent years.)

Luis Rosero Bixby, University of Michigan, Ann Arbor $8,000
Toward the costs of a research project on the effect of fertility decline upon infant mortality in Costa Rica. (Joint grant with Health Sciences, for a total of $16,000.)

Commonwealth Regional Health Secretariat for East, Central, and Southern Africa, Arusha, Tanzania 94,200
For the introduction of reproductive health research in national research institutions

Foundation-administered project
Conference held in April on how to reduce rates of morbidity and mortality and effect a "health transition" in developing countries. (Joint grant with Health Sciences, for a total of $600,000.)

Harvard University, Cambridge, Massachusetts [1988—$165,000]
To help the School of Public Health establish an international scientific network on AIDS and reproductive health. (Joint grant with Health Sciences, for a total of $330,000.)

International Women's Health Coalition, New York, New York [1988—$300,000]
To extend its reproductive health program to selected countries of sub-Saharan Africa. (Joint grant with Health Sciences, for a total of $300,000.)

Kenya Medical Research Institute, Nairobi 17,080
For a training program in laboratory techniques applicable to the study of human immunodeficiency virus

Program for Appropriate Technology in Health (PATH), Seattle, Washington 72,600
For the development of a dipstick assay for HIV screening in the developing world. (Joint grant with Health Sciences, for a total of $100,000.)

Rand Corporation, Santa Monica, California 45,000
Toward the costs of a study on birth spacing and maternal and child health using longitudinal data from Malaysia and Guatemala. (Joint grant with Health Sciences, for a total of $80,000.)

South-to-South Cooperation in the Population Sciences and Reproductive Health

(Other grants from this appropriation are listed under the division's first guideline, Developing Technology for Fertility Regulation, and second guideline, Improving Population Policies and Programs.)

African Fertility Society, Nairobi, Kenya 13,550
To compile information on AIDS research projects in Africa. (Joint grant with Health Sciences, for a total of $27,150.)

Fellowships

Biotechnology Career Fellowships [1988—$300,000] $141,533
Special Programming Grants

Brackets show the years and original amounts of appropriations from which grants have been made. Appropriations may be made entirely to a single institution or they may be allocated to a number of recipients. Such allocations may be made over a period of years until the appropriation is expended. Listings without brackets are grants-in-aid, each of which is made to a single recipient for $100,000 or less.

Grants in 1989

Africa Leadership Foundation, New York, New York
Toward the 1989 activities of the Africa Leadership Forum
$ 25,000

African Academy of Sciences, Nairobi, Kenya [1988—$250,000]
To support the academy's effort to establish a core program of activities designed to mobilize and strengthen the African scientific community's contribution to development
250,000

African Dissertation Internship Awards [1988—$875,000, in addition to 1987—$750,000]

Addis Ababa University, Ethiopia
For administrative costs associated with Alexander Naty's affiliation with the university
2,500

African Academy of Sciences, Nairobi, Kenya
To explore and institute mechanisms for ensuring the integration of internship awardees into the African scientific community once they have finished their graduate work
25,000

Agricultural Research Corporation of Sudan, Wad Medani
For administrative costs associated with Mirghani S. Mohamed's affiliation with the organization
2,500

Ahmedu Bello University, Zaria, Nigeria
For administrative costs associated with Phindile E. Olorunju's affiliation with the university
2,500

Tierno Bah, doctoral candidate from Guinea, award administered by the University of Texas at Austin
To conduct dissertation research at the University of Conakry, Guinea. Research title: "A Speech Community of Verbal Artists: The Nyamakala of Fuuta Jalon"
21,700

Seostei Chiotha, doctoral candidate from Malawi, award administered by the University of Maryland, College Park
To conduct dissertation research at the University of Malawi. Research title: "Biological Control of Schistosomiasis by Snail-Eating Fish from Lake Malawi"
18,440

Seshi Chonco, doctoral candidate from South Africa, award administered by Michigan State University, East Lansing
To conduct dissertation research at the University of Witwatersrand. Research title: "Political Trade Unions in South Africa: An Historical and Socioeconomic Analysis, 1955-1980"
29,000

Hassan El Mahdi El Bushra, doctoral candidate from Sudan, award administered by the University of California-Los Angeles
To conduct dissertation research at the University of Khartoum, Sudan. Research title: "A Study of the Interrelationship Between Diarrhea and Vitamin A Deficiency in Sudanese Children Under 5"
27,500

Mugangu Thnto Enama, doctoral candidate from Zaire, award administered by the University of Maine at Orono
To conduct dissertation research at the Lubumbi Research Center, Virunga National Park, Zaire. Research title: "Habitat Selection by the African Buffalo in Virunga National Park, Zaire"
22,900

© 2003 The Rockefeller Foundation
Grants in 1988

Arthur Eshiwam, doctoral candidate from Kenya, award administered by the University of California-Berkeley
- To conduct dissertation research at the University of Nairobi, Kenya
- Research title: "Fiscal Revival of Local Authorities: A Quest for Government Authorities"
- $17,500

Institut Supérieur Pedagogique de Bukavu, Zaire
- For administrative costs associated with Bucyalimwe Mararo's affiliation with the institute
- $2,500

Institut Zairois pour la Conservation de la Nature, Kinshasa, Zaire
- For administrative costs associated with Mugangu Trinto Enama's affiliation with the institute
- $2,500

Karungan Kiragu, doctoral candidate from Kenya, award administered by Johns Hopkins University, Baltimore, Maryland
- To conduct dissertation research at the University of Nairobi, Kenya
- Research title: "The Determinants of Premarital Sexual and Contraceptive Behavior Among Adolescents in Kenya"
- $26,000

Samuel Kisseadoo, doctoral candidate from Ghana, award administered by Lehman College, City University of New York
- To conduct dissertation research at the University of Science and Technology, Kumasi
- Research title: "The Taxonomy and Ecology of Trees of Bobin Forest Reserve, Ghana"
- $23,600

Mubiana Macwan g), doctoral candidate from Zambia, award administered by the University of North Carolina at Chapel Hill
- To conduct dissertation research at the University of Zambia
- Research title: "The Effects of Communication about Family Size on Contraceptive Intentions and Use Among Low Income Couples in Zambia"
- $26,000

Gerald Magutu, doctoral candidate from Kenya, award administered by the University of California-Berkeley
- To conduct dissertation research at the University of Nairobi, Kenya
- Research title: "Urban Low-Income Housing and Community Development: A Nairobi Case Study"
- $15,200

Makerere University, Kampala, Uganda
- For administrative costs associated with John Ssekamette Ssebuhba's affiliation with the university
- $2,500

Bucyalimwe Mararo, doctoral candidate from Zaire, award administered by Indiana University, Bloomington
- To conduct dissertation research at the Institut Supérieur Pedagogique de Bukavu, Zaire
- $22,450

David Mazambam, doctoral candidate from Zimbabwe, award administered by Clark University, Worcester, Massachusetts
- To conduct dissertation research at the University of Zimbabwe
- Research title: "Relationship Between Rural Urban Labor Migration Culture and Agriculture Manicaland Province, Zimbabwe"
- $22,500

Mirghani S Mohamed, doctoral candidate from Sudan, award administered by the University of Nebraska, Lincoln
- To conduct dissertation research at the Agricultural Research Corporation of Sudan
- Research title: "Yield, Bio-Nitrogen Availability and Water Use of Grain Sorghum and Millet Growth in Rotation with Legumes"
- $23,700
Davison Munodawafa, doctoral candidate from Zimbabwe, award administered by the University of Arkansas Foundation, Fayetteville

To conduct dissertation research at the University of Zimbabwe. Research title “Use of Student Nurses on Community Assignment in the Implementation of Health Instruction in Rural Secondary Schools of Zimbabwe”

Alexander Nuit, doctoral candidate from Ethiopia, award administered by Stanford University, California

To conduct dissertation research at Addis Ababa University, Ethiopia. Research title “An Historical Approach to Ethnic Processes. The Case of the Majangir People of Southwest Ethiopia”

Cyrille Nia monitoring, doctoral candidate from Burkina Faso, award administered by Cornell University, Ithaca, New York

To conduct dissertation research at the Université Nationale du Benin. Research title “Monitoring and Promotion of Child Growth in Primary Health Setting of Pahou, Ouadah, Benin”

Folu Ogun Gumi, doctoral candidate from Nigeria, award administered by Indiana University, Bloomington

To conduct dissertation research at the University of Lagos. Research title “Communication and Structural Determinants of Vaccine Acceptance Among Nursing Mothers in Northern and Southern Nigeria”

Phindile Olorunju, doctoral candidate from Nigeria, award administered by the University of Georgia, Athens

To conduct dissertation research at Ahmadu Bella University. Research title “Groundnut Rosette Heritability Resistance and Reaction of Peanut Genotypes to the Causal Agents”

Justin Rushemeza, doctoral candidate from Rwanda, award administered by Cornell University, Ithaca, New York

To conduct dissertation research at the Université Nationale du Rwanda. Research title “Economics of Rice Production in Rwanda: A Cost-Return and Comparative Advantage Analysis”

Ladislaus Semali, doctoral candidate from Tanzania, award administered by the University of California Los Angeles

To conduct dissertation research at the University of Dar es Salaam. Research title “Communication Media: An Analysis of Their Role in Post Literacy Programs in Tanzania”

John Ssekamatte-Ssebuliba, doctoral candidate from Uganda, award administered by Brown University, Providence, Rhode Island

To conduct dissertation research at Makerere University, Uganda. Research title “Some Policy Relevant Determinants of Infant Survival in Uganda”

Université Nationale du Benin, Cotonou

For administrative costs associated with Cyrille Nia monitoring’s affiliation with the university

Université Nationale du Rwanda, Butare

For administrative costs associated with Justin Rushemeza’s affiliation with the university

University of Conakry, Guinea

For administrative costs associated with Tieno Bah’s affiliation with the university

University of Dar es Salaam, Tanzania

For administrative costs associated with Ladislaus Semali’s affiliation with the university
Grants
in 1988

University of Ilorin, Nigeria
For administrative costs associated with Ezekiel Walker's affiliation with the university
$2,500

University of Khartoum, Sudan
For administrative costs associated with Hassan El Madha El Bushra's affiliation with the university
2,500

University of Lagos, Nigeria
For administrative costs associated with Folu Ogunduma's affiliation with the university
2,500

University of Malawi, Zomba
For administrative costs associated with Sostem Chwthas affiliation with the university
2,500

University of Nairobi, Kenya
For administrative costs associated with Arthur Eshiwam's affiliation with the university
2,500
For administrative costs associated with Gerald Muoguti's affiliation with the university
2,500
For administrative costs associated with Karungan Kiragu's affiliation with the university
2,500

University of Science and Technology, Kumasi, Ghana
For administrative costs associated with Samuel Kisseadoo's affiliation with the university
2,500

University of Witwatersrand, Johannesburg, South Africa
For administrative costs associated with Seshi Chonco's affiliation with the university
2,500

University of Zambia, Lusaka
For administrative costs associated with Mubiana Macon'gi's affiliation with the university
2,500

Ezekiel Walker, doctoral candidate from Nigeria, award administered by Michigan State University, East Lansing
To conduct dissertation research at the University of Ilorin, Nigeria. Research title: "Transformation and Crisis: A Study of Agricultural History of Southwestern Nigeria, 1945-1980"
$23,450

Foundation-administered project
Program support costs for the African Dissertation Internship Awards program
$25,000

African Economic Research Consortium Program [1987—$550,000]
Foundation-administered project
Operating costs of the program in Nairobi, Kenya
$200,000

African Forum on Children's Technological Literacy [1988—$300,000]
To generate popular understanding in Africa of the practical applications of science and technology by children and young adults (Grants will be made in subsequent years)

American Academy of Arts and Sciences, Cambridge, Massachusetts
Toward the costs of a conference and publications on "The Genetic Revolution: Scientific Prospects and Public Perceptions" (Joint grant with Agricultural Sciences, Health Sciences, and Population Sciences, for a total of $40,000)
### Special Programming Grants (continued)

</table>

© 2003 The Rockefeller Foundation
Institute for International Economics, Washington, D.C.
Toward the costs of a study entitled “Debt Relief for Low Income Africa: Issues and Options for the United States” $99,000
Toward the costs of a study entitled “Trade Liberalization, International Finance, and International Institutions: The Vital Linkages” $75,000

Institute of Southeast Asian Studies, Singapore
Toward the costs of a project entitled “The Scientific and Technological Revolution and its Bearing on Regional and International Affairs and Stability” $100,000

Toward the costs of an evaluatory review of distance education in the Third World and of IEC’s contribution to its development $50,000

To continue support for the institute’s regional security studies program and its interaction with centers of international affairs in developing countries $320,000

Johns Hopkins University, Baltimore, Maryland
Toward the costs of a study entitled “Political Economy of African Countries” $28,200
Toward the costs of the phase one evaluation of the Mahaweli development project in Sri Lanka $10,700

Massachusetts Institute of Technology, Cambridge, Massachusetts
Toward the costs of a study entitled “A Debt Relief Agenda for the 1990s” $35,000

Medical Research Council, Cambridge, England
To enable the council to participate in the World Molecular Engineering Network $75,000

National Bureau of Economic Research, Cambridge, Massachusetts [1988—$200,000]
To support the establishment of a program involving collaborative policy research by U.S. and Latin American economists on issues central to Latin America’s economic recovery and long-term growth $200,000

National University, San Jose, Costa Rica
Toward the travel costs of Latin American participants in the Eighth Latin American Meeting of the Econometric Society, held in San Jose, August 2-5, 1988 $20,000

New York Academy of Sciences, New York
Toward the costs of 1,000 copies of the proceedings of the academy’s conference “Under the Volcano: Biomedical Science and the Third World” for distribution by the World Health Organization throughout the developing world $25,000

Philip Ndegwa, Nairobi, Kenya
For a research and writing project on nationalism and development in Africa $35,000

Panos Institute, Alexandria, Virginia
To prepare an introductory dossier on biotechnology and sustainable development for distribution in developing countries (Joint grant with Agricultural Sciences, Health Sciences and Population Sciences, for a total of $92,000) $23,000
For a program definition study on biotechnology and the Third World $10,000

Pontificia Universidade Catolica do Rio de Janeiro, Brazil
Toward the travel costs of the Latin American participants in the Inter-American Seminar on Economics $10,000
Reflections on Development [1988—$600,000, in addition to 1985—$530,000 from Special Interests and Explorations]

To encourage outstanding Third World scholars to focus on the most recent lessons, experiences, and challenges to development in different developing countries, and in the process to foster greater collaboration among scholars across countries and regions (Fellowships to be awarded in 1989)

Foundation-administered project
Program support expenses for the Reflections on Development program

$10,000

Research on Improved Conservation and Management of Tropical Forest Resources [1987—$400,000]

Oxford University, England
To be used by the Oxford Forestry Institute for research on incentives for smallholder tree growing in East Africa

$45,000

World Resources Institute, Washington, D.C.
To initiate a program that will establish a conceptual framework for and help launch a global cooperative effort to maintain biological diversity

$50,000

Resources Development Foundation, Washington, D.C.
Toward the cost of its international biotechnology program (Joint grant with Agricultural Sciences and Health Sciences, for a total of $50,000)

$25,000

Scripps Clinic and Research Foundation, La Jolla, California
To enable the Research Institute of Scripps Clinic to participate in the World Molecular Engineering Network

$75,000

Toward the costs of a symposium, "Frontiers in Biomedical Research"

$40,000

For a graduate program in molecular engineering

$10,000

For a meeting on "Structural and Chemical Basis for Cell Biological Function"

$10,000

SNS-Center for Business and Policy Studies, Stockholm, Sweden
Toward the costs of its "Workshop on International Textile Trade, the Multi-Fibre Arrangement, and the Uruguay Round"

$25,000

United Nations Research Institute for Social Development, Geneva, Switzerland
Toward the costs of a conference, "Economic Crisis and Third World Countries: Impact and Response"

$25,000

University of California-Berkeley
Toward the cost of a study entitled "Public Sector Performance in Latin America"

$50,000

University of California-San Francisco
To enable the university to participate in the World Molecular Engineering Network

$75,000

University of Dar es Salaam, Tanzania
Toward the costs of a science camp for high school students in Tanzania

$30,000

A Voice for Africa in the U.S. [1988—$1,200,000]
To strengthen a voice for Africa in the United States, with particular focus on the U.S. foreign and development policy communities (Grants will be made in subsequent years)

World Bank, Washington, D.C.
To support the attendance of developing country participants at the World Bank's first annual conference on development economics

$29,000

Toward the costs of its review of "Health Sector Priorities in the Developing World" (Joint grant with Health Sciences, for a total of $50,000)

$10,000
Arts and Humanities Grants

Brackets show the years and original amounts of appropriations from which grants have been made. Appropriations may be made entirely to a single institution or they may be allocated to a number of recipients. Such allocations may be made over a period of years until the appropriation is expended. Listings without brackets are grants-in-aid, each of which is made to a single recipient for $100,000 or less.

Grants in 1988

Extending International and Intercultural Scholarship

American Academy of Arts and Sciences, Cambridge, Massachusetts $25,000
Toward the costs of preparing and editing a special issue of Daedalus entitled “Gender Perspectives on Education and Development”

American Association of Museums, Washington, D.C. 30,000
Toward the costs of its Museum Data Collection Program

American Council of Learned Societies, New York, New York [1988—$300,000] To support basic scholarly research toward the production of the “American National Biography” 300,000
For use by its International Research and Exchanges Board to continue scholarly projects associated with an archival exchange between the United States and the Soviet Union 30,000

Bronx Museum of the Arts, New York 80,000
Toward costs associated with the exhibition “The Latin American Spirit in the United States 1929-1970”

California Afro-American Museum Foundation, Los Angeles 50,000
Toward the costs of an exhibition entitled “Introspectives: Contemporary Art by Americans and Brazilians of African Descent”

Council of American Overseas Research Centers, Washington, D.C. 25,000
Toward the further development of its programs on behalf of American scholars working abroad

Foundation administered projects
Costs of two conferences, jointly organized by the Foundation and the Smithsonian Institution, on intercultural museums practice 100,000
A study of possible community-wide programming to feature Mexican cultural achievements in the context of a major exhibition being developed by the Metropolitan Museum of Art, New York 30,000

Friends of Puerto Rico, New York, New York 10,000
For use by the Museum of Contemporary Hispanic Art toward exhibition costs and accompanying educational materials for the exhibition Homage to José Campúa

Harvard University, Cambridge, Massachusetts 62,000
In support of a program in development history

Indiana University, Bloomington 10,800
For use by its African studies program toward the cost of its African ethnomusicoLOGY curriculum program

International African Institute, London, England 60,000
Toward the development of training programs in documentation and educational activities, and toward the development of exchange and networks among museums

Joint Center for Political Studies, Washington, D.C. 25,000
Toward the costs of a study entitled “Black Americans and International Law” (Joint grant with Equal Opportunity, for a total of $75,000)

Mary McLeod Bethune Museum Archives, Washington, D.C. 50,000
Toward the further costs of its development efforts

Mexican Museum, San Francisco, California 5,000
For the participation of humanities scholars in the symposium “From the Inside Out Mexican Folk Art in a Contemporary Context”

1988 Annual Report
Performing Arts Journal, New York, New York  
$35,000  
*To support publications that focus on interculturalism*

Research Foundation of the State University of New York, Buffalo  
$25,000  
*For use by SUNY-Buffalo toward the costs of the First International Women's Playwrights Conference*

**Resident Fellowships in the Humanities [1988—$2,000,000]**

- **Harvard University, Cambridge, Massachusetts**  
  $145,000  
  *To support humanities scholarship intended to illuminate and assess international and intercultural issues*

- **Institute for Advanced Study, Princeton, New Jersey**  
  $24,500  
  *To support a conference entitled "The Impact of Women's Studies Research on Academic Discourse"*

- **Johns Hopkins University, Baltimore, Maryland**  
  $220,400  
  *To support a program of resident fellowships in the history of art and anthropology*

- **Newberry Library, Chicago, Illinois**  
  $144,600  
  *To support a program of resident fellowships at its D'Arcy McNickle Center for the History of the American Indian*

- **Queens College, the City University of New York, New York**  
  $225,000  
  *To support a program of resident fellowships at its Asian-American Center*

- **Rice University, Houston, Texas**  
  $225,000  
  *To support a program of resident fellowships at its Center for Cultural Studies*

- **University of Hawaii at Manoa**  
  $83,400  
  *To support a program of resident fellowships at its Center for Pacific Island Studies*

- **University of Maryland Foundation, College Park**  
  $82,700  
  *To support a program of resident fellowships in the University's Department of Spanish and Portuguese and Research Center for Arts and Humanities*

- **University of Minnesota, Minneapolis**  
  $225,000  
  *To support a program of resident fellowships at its Center for Advanced Feminist Studies*

- **University of New Mexico, Albuquerque**  
  $224,000  
  *To support a program of resident fellowships at its Southwest Hispanic Research Institute*

- **University of Pennsylvania, Philadelphia**  
  $219,100  
  *To support a program of resident fellowships at its Center for the Study of Black Literature and Culture*

- **Wayne State University, Detroit, Michigan**  
  $145,000  
  *To support a program of resident fellowships at its Walter P Reuther Library of Labor and Urban Affairs*

**Foundation-administered project**

- **Program support expenses**  
  $48,000

**St Louis Art Museum, Missouri [1988—$150,000]**  
$150,000  
*To support an exhibition devoted to the art and social context of the Caribbean festival tradition*

**Salzburg Seminar in American Studies, Cambridge, Massachusetts**  
$60,000  
*Toward the costs of its August 1988 international session on "Gender and the Humanities"*
Grants in 1988

Smithsonian Institution, Washington, D.C.
[1988—$150,000] To conduct experiments in exhibitions presenting non-Western cultures and American cultural minorities. $150,000

For use by the National Museum of African Art in further planning for an exhibition on nomadic architecture. 25,000

Southport Institute of Policy Analysis, Southport, Connecticut
Toward development of an overall national plan to promote adult literacy. 10,000

Studio Museum in Harlem, New York, New York
To continue research for an exhibition of contemporary African art. 25,000

University of California—Los Angeles
For use by the Vight Art Gallery toward the planning costs of an exhibition entitled “Defining Chicano Art.” 50,000

Vanderbilt University, Nashville, Tennessee
For use by its Center for Latin American and Iberian Studies toward the costs of completing “The Cambridge History of Latin American Literature.” 25,000

Washington Project for the Arts, Washington, D.C.
Toward the costs of “New Television,” a series of experimental works by video artists. 25,000

Increasing Artistic Experimentation Across Cultures

Toward expenses relating to the African symposium workshop in Mauritius. $20,000

American Council for the Arts, New York, New York
Toward the publication and dissemination of a book entitled Aspects of International Cultural Exchange: Looking to the Year 2000. (See complementary grant to the Institute of International Education.) 18,500

American Dance Festival, New York, New York
Toward the continuation of its International Choreographers Workshop. 76,000

American Music Center, New York, New York
For coordination of American Music Week activities in the U.S. 20,000

American Music Theater Festival, Philadelphia, Pennsylvania
Toward commissioning and workshop expenses for the “Latin Connection” project. 65,000

American Place Theatre, New York, New York
Toward its further development and production of original theater pieces that illuminate American history and culture. 25,000

American Repertory Theatre Company, Cambridge, Massachusetts
Toward expenses of two theatrical workshops/residencies to facilitate collaboration with international artists. 50,000

Appalshop, Whitesburg, Kentucky
In support of its American Festival of regional and ethnic work. 17,500

Arts and Business Council, New York, New York
Toward costs of the Sybil Simon Multicultural Administration Internship Program. 25,000
Arts and Humanities Grants (continued)

Association of College, University, and Community Arts Administrators, Washington, D.C.
$100,000
For the establishment of a national task force on the presenting and touring of contemporary artists

Association of Hispanic Arts, New York, New York
30,000
For the further development of AHA's Hispanic News

Baltimore Theatre Project, Maryland
44,360
Toward the costs of a residency and touring project involving Argentina's Teatro del Sur

Boston Dance Umbrella, Massachusetts
25,000
Toward the humanities conferences and contextual activities surrounding the presentation of Tour de Fuerza and Africa Oye

Brooklyn Academy of Music, New York
50,000
For the planning and development of a Pacific Rim Festival

Brooklyn Institute of Arts and Sciences, New York
25,000
For use by the Brooklyn Museum toward costs of a three-day conference and educational programs related to the Hispanic Art in the United States exhibition

Center for Contemporary Arts of Santa Fe, New Mexico
25,000
Toward the organization and touring expenses of Ceremony of Memory

Center for Puppetry Arts, Atlanta, Georgia
15,000
For expenses of the international participants in its "Puppetry of the Americas" festival and accompanying conference

City University of New York
25,000
To enable CUNY-TV to acquire and broadcast a series of films dealing with Latin America

Collective for Living Cinema, New York, New York
10,000
Toward a conference, publication, and touring package based on "Misrepresentations A Corrective Film Series"

Columbus, Inc., Brooklyn, New York
10,000

To enable it to continue its program “Opera for the Eighties and Beyond.”
### Equal Opportunity Grants

Brackets show the years and original amounts of appropriations from which grants have been made. Appropriations may be made entirely to a single institution or they may be allocated to a number of recipients. Such allocations may be made over a period of years until the appropriation is expended. Listings without brackets are grants-in-aid, each of which is made to a single recipient for $100,000 or less.

#### Equal Opportunity for the Urban Poor

</table>
Grants in 1988

University of Massachusetts, Amherst
  Toward the costs of a study entitled “Child Care Dilemmas and Coping Strategies Among Low-Income Mothers.” $69,240

  To enable researchers to conduct analysis of persistent poverty and the underclass and to provide the results to policymakers and opinion leaders. 377,800

Urban Strategies Council, Oakland, California
  Toward the cost of an Academic Roundtable on Early Childhood Education. 25,000

  Toward the cost of its National Child Support Project. 150,000
  Grant-in-aid toward the same project. 100,000

Women’s Research and Education Institute, Washington, D.C.
  Toward the cost of publishing and distributing a series of papers on family-leave policies in Europe and the United States. 20,000

Protecting Basic Rights

Civil Rights Project, Boston, Massachusetts
  [1988—$100,000] To help (1) the production, with accompanying educational materials, of a sequel to the “Eyes on the Prize” public television series that documented the early years of the civil rights movement, and (2) the establishment of an archive based on the two series. (Joint grant with Arts and Humanities and Special Interests and Explorations, for a total of $400,000.) $100,000
  Toward the cost of reprinting and distributing educational materials to accompany its public television series “Eyes on the Prize.” (Joint grant with Arts and Humanities, for a total of $94,600.) 47,300

Joint Center for Political Studies, Washington, D.C.
  Toward the cost of a study entitled “Black Americans and International Law.” (Joint grant with Arts and Humanities, for a total of $75,000.) 50,000
  Toward the cost of its Fifth National Policy Institute. 25,000

Lawyers’ Committee for Civil Rights Under Law, Washington, D.C. [1987—$1,250,000]
  Toward the cost of technical assistance and administrative reforms. 187,500

Mexican American Legal Defense and Educational Fund, Los Angeles, California
  [1988—$1,300,000] To provide stable support for the fund’s litigation activities in the field of civil rights, and to help the fund improve financial planning and management practices and initiate fundraising strategies that will attract new donors, thereby lessening its dependence on private foundations’ support. 1,150,000
  Toward the cost of technical assistance and administrative reforms. 150,000

NAACP Legal Defense and Educational Fund, New York, New York
  For an in-depth survey of racial attitudes in the U.S. 75,000

NAACP Special Contribution Fund, Baltimore, Maryland [1988—$300,000]
  To continue support for the NAACP’s public interest, employment litigation, and affirmative action activities designed to overcome the effects of past discrimination and unfair labor practices. 300,000

National Center for Immigrants’ Rights, Los Angeles, California
  Toward the cost of research on issues of persistent poverty and the underclass as these affect the Hispanic population. 29,780
  Toward the cost of an assessment of its overall organizational status, to be conducted by the Management Assistance Group. 14,000

1988 Annual Report
Phelps Stokes Fund, New York, New York

In support of the New York State Judicial Commission on Minorities

Program to Explore Long-Term Implications of Changing Gender Roles

[1988—$800,000, in addition to 1987—$800,000. Jointly funded with Special Interests and Explorations]

Carole A Beere, Central Michigan University, Mount Pleasant
For a study entitled “Measurement in Gender Role Research: A Handbook of Quality Instruments”

Wendy Chavkin, Bureau of Maternity Services and Family Planning, New York City Department of Health
For a study entitled “The Social Construction of Conflict Between Mother and Fetus and Its Impact on the Health of Poor Women”

Kathleen Daly, Yale University, New Haven, Connecticut
For a study entitled “Gender and Conceptions of Justice in the Criminal Court”

Mark A Fossett, Population Research Center, University of Texas at Austin
For a study entitled “Family Formation and Gender-Role Attitudes Among Blacks: A Multi-Level Analysis of the Effects of the Sex Ratio”

Naomi Ruth Gerstel, University of Massachusetts-Amherst
For a study entitled “Women’s Charity Work and the Transformation of Gender Roles”

Alice Kessler-Horn, Temple University, Philadelphia, Pennsylvania
For a study entitled “A History and Politics of Difference”

K Jill Kiecolt, Louisiana State University, Baton Rouge
For a study entitled “Family Formation and Gender-Role Attitudes Among Blacks: A Multi-Level Analysis of the Effects of the Sex Ratio”

Gail Kligman, University of Texas, Austin
Toward the costs of a study entitled “The Handmaid’s Tale: Policy, Gender, and the Body Politic in the Socialist Republic of Romania”

Miram M Johnson, University of Oregon, Eugene
For a study entitled “Gender, Structural Differentiation, and the Family”

Kyriakos Markides, University of Texas Medical Branch, Galveston
For a study entitled “Employment and Mental Health in Mexican American Women”

Memphis State University, Tennessee
Toward the costs of a study by Julia Heath, assistant professor of economics, entitled “An Econometric Analysis of the Determinants of Poverty Spells Following Divorce”

Gwendolyn Mink, University of California-Santa Cruz
Toward the costs of a study entitled “The Wages of Motherhood: Gender, Race, and Citizenship in the Development of the Welfare State, 1900-1937”

Harriet B Presser, University of Maryland, College Park
For a study entitled “The Changing Work Shifts of Americans in a Family Context: A Focus on Gender Differences” (Grant administered by Transnational Family Research Institute, Bethesda, Maryland)

Margaret Rossiter, Cornell University, Ithaca, New York
Toward the cost of a study entitled “Gender Roles in Science in Post-Industrial America, 1940-1970”

Judith Stacey, University of California-Davis
For a study entitled “Postmodern Gender and Kinship Relationships in the Silicon Valley”
University of Virginia, Charlottesville
Toward costs of a study by Dr. Thomas M. Guterbock entitled “Political Participation of Women in the United States: Causal Analysis of Change and Stability, 1967-1987”

Sylvia Juno, Stanford University, California
For a study entitled “Gender and the New Industrialism: The Impact of Changing Gender Roles on Italian Family Firms”

Public Education Association, New York, New York
Toward the cost of reprinting a report entitled “Governing the New York City Schools: Roles and Relationships in the Decentralized System”

Puerto Rican Legal Defense and Education Fund, New York, New York
Toward the cost of its litigation activities

Smithsonian Institution, Washington, D.C.
Toward the cost of a symposium entitled “Afro-Americans and the Evolution of a Living Constitution”

Trends, Inc., Washington, D.C.
Toward the costs of sponsoring a series of Fair Housing Check-ups
Toward the cost of conducting a subscription campaign

Urban Institute, Washington, D.C.
Toward the cost of a study on impediments to residential mobility faced by working-class and lower-income minority families

Voter Registration Education Activities [1987—$355,000]

American Citizenship Education Project, Washington, D.C.
To conduct nonpartisan voter registration education and monitoring activities among minority-group citizens

Center for Community Change, Washington, D.C.
For use by its Funders’ Committee for Voter Registration and Education Project to increase support for nonpartisan voter registration education and monitoring activities among minority-group citizens

Midwest Voter Registration Education Project, Columbus, Ohio
To conduct nonpartisan voter registration education and to monitor activities among minority-group citizens

National Coalition on Black Voter Participation, Washington, D.C.
To conduct nonpartisan voter registration education and to monitor activities among minority-group citizens

Southwest Voter Registration Education Project, San Antonio, Texas
To conduct nonpartisan voter registration education and to monitor activities among minority-group citizens

Voter Education Project, Atlanta, Georgia
Toward the cost of its voter registration education and monitoring activities

Other

These grants were approved under former guidelines

Howard University, Washington, D.C.
[1988—$150,000] To provide terminal support for a Foundation-initiated program providing minority-group school students with summer employment as apprentices in life-science research laboratories at universities

Grant-in-aid to provide support for this program

1988 Annual Report
Other Interests and Initiatives Grants

Brackets show the years and original amounts of appropriations from which grants have been made. Appropriations may be made entirely to a single institution or they may be allocated to a number of recipients. Such allocations may be made over a period of years until the appropriation is expended. Listings without brackets are grants-in-aid, each of which is made to a single recipient for $100,000 or less.

Advanced Training Fellowships

Agricultural Sciences

China
Chen Dabai, agricultural economics. Appointed from Iowa State University. Place of study: Iowa State University, Ames, Iowa.
Chen Mingshun, biochemistry. Appointed from the China National Rice Research Institute, Hangzhou. Place of study: Kansas State University, Manhattan, Kansas.
Jiang Jiping, plant pathology. Appointed from the China National Rice Research Institute, Hangzhou. Place of study: University of California, Riverside, California.
Wu Kunsheng, plant breeding. Appointed from South China Agricultural University, Guangzhou. Place of study: Cornell University, Ithaca, New York.
Zhu Qun, rice biotechnology. Appointed from Shanghai Institute of Plant Physiology. Place of study: the Salk Institute, La Jolla, California.

Philippines
Rolando Cruz, agronomy. Appointed from Texas A&M University. Place of study: Texas A&M University, College Station, Texas.

Zaire

Zimbabwe
Muntubani Nazima, plant physiology. Appointed from the Ministry of Lands, Agriculture and Rural Resettlement, Chiredzi. Place of study: University of California, Davis, California.

Health Sciences

Ghana
Kojo Mensa-Wilmot, molecular parasitology. Appointed from Johns Hopkins University. Place of study: Johns Hopkins University, Baltimore, Maryland.

Korea
Population Sciences

Burkina Faso

Clement Ahiadeke, demography. Appointed from the University of Ghana, Legon. Place of study: Johns Hopkins University, Baltimore, Maryland.

Cameroon

Kuati Defo Barthélémy, demography. Appointed from the Ministry of Planning and Regional Development, Yaoundé. Place of study: University of Wisconsin, Madison, Wisconsin.

Chile

Hernan Lara, reproductive biology. Appointed from the University of Chile, Santiago. Place of study: Oregon Regional Primate Research Center, Beaverton, Oregon.

China

Chen Yi, reproductive biology. Appointed from Shanghai Medical University. Place of study: Columbia University, New York, New York.

Guo Shenyang, demography. Appointed from Fudan University. Place of study: University of Michigan, Ann Arbor, Michigan.

Yang Haitou, sociology. Appointed from Beijing University. Place of study: University of Hawaii, Honolulu, Hawaii.

Ghana

Kofi Benefo, sociology. Appointed from the University of Michigan. Place of study: University of Michigan, Ann Arbor, Michigan.

India

Vinod Singh, reproductive biology. Appointed from North-Eastern Hill University, Shillong. Place of study: Clinical Research Institute of Montreal, Montreal, Canada.

Nigeria

Peter Nwakere, sociology. Appointed from the University of Nigeria, Nsukka. Place of study: Fordham University, Bronx, New York.

Philippines

Aurora Perez, demography. Appointed from the University of the Philippines, Diliman. Place of study: Brown University, Providence, Rhode Island.

Senegal

François Diop, demography. Appointed from the Ministry of Economics and Finance, Dakar. Place of study: Johns Hopkins University, Baltimore, Maryland.

Sierra Leone

Joseph Kamara, demography. Appointed from the University of Sierra Leone, Freetown. Place of study: London School of Hygiene and Tropical Medicine, London, United Kingdom.

Uganda

Agricultural Sciences

Akinwumi Adesina, an agricultural economist participating in the West African sorghum program, while located at the International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) project in Bamako, Mali.

James Delehanty, a geographer studying the role of geographic information systems in studies of the impact of livestock diseases and their control in Africa, while located at the International Laboratory for Research on Animal Diseases (ILRAD), Nairobi, Kenya.

Les Field, an anthropologist conducting research on seed production by small farmers in Latin America, while located at the Centro Internacional de Agricultura Tropical (CIAT), Cali, Colombia.

Mitchell Renkow, an agricultural economist studying the macrolevel and distributional impacts of technological change, while located at the Centro Internacional de Mejoramiento de Maíz y Trigo (CIMMYT), Mexico City, Mexico.

Louise Sperling, an anthropologist assisting the Centro Internacional de Agricultura Tropical (CIAT) in its regional bean program in central Africa, while located at Butare, Rwanda.

Richard Tutwiler, an anthropologist participating in the Farm Resource Management Program project on the adoption and impact of technology, while located at the International Center for Agricultural Research in Dry Areas (ICARDA), Aleppo, Syria.

Population Sciences

Charles Hammerslough, a sociologist conducting research on the contextual and community determinants of demographic processes, while located at the Population Studies and Research Institute, University of Nairobi, Kenya.

Susan Hunter, an anthropologist conducting research on health and population trends in Uganda, while located at the Institute of Statistics and Applied Economics, Makerere University, Kampala, Uganda.

Mark Montgomery, an economist participating in the teaching and research activities of the Department of Geography and Planning, University of Lagos, Nigeria.

Carl Schmertmann, an economist conducting research on economic determinants of migration in Brazil, and the interactions between migration and other demographic phenomena, while located at the Centro de Desenvolvimento e Planejamento Regional (CEDEPLAR), Belo Horizonte, Brazil.

Edward Telles, a sociologist conducting research on migration, employment, and development, while located at the Instituto de Filosofia e Ciencias Sociais, Universidade Estadual de Campinas, Brazil.
Biotechnology Career Fellowships

Agricultural Sciences

Egypt

Yehia A.I. Abdel-Aal, Assiut University. Molecular approaches to investigating the toxicological significance of glutathione S-transferase, at North Carolina State University, Raleigh, North Carolina.

China

Fang Rong-Xiang, Institute of Microbiology, Beijing. Molecular characterization of rice Yellow Stunt virus, at Rockefeller University, New York, New York.

Hong Guo-fang, Shanghai Institute of Biochemistry. Regulation of nodulation genes of Rhizobium, at John Innes Institute, Norwich, United Kingdom. (Renewal)

Ma Qing-Sheng, Guangxi Agricultural College. Nanjing. Genes of plant-microbe interactions, at John Innes Institute, Norwich, United Kingdom. (Renewal)

Xie Wei-dong, Zhongshan University, Guangzhou. Use of a baculovirus expression vector for production of an antigen of Babesia bovis that protects against challenge, at Imperial College of Science and Technology, London, United Kingdom.

Zhu Lihuang, Institute of Genetics, Beijing. Completion and application of the rice RFLP map, at Cornell University, Ithaca, New York.

Zhu Zhen, Institute of Genetics, Beijing. Procedures for liposome-mediated transformation of rice protoplasts, at the University of Tennessee, Knoxville, Tennessee.

India

Devaki Bhaya, Jawaharlal Nehru University, New Delhi. Anoxygenic photosynthesis in cyanobacteria and its possible role in increasing yields from rice paddies, at Carnegie Institution of Washington, Stanford, California.

Korea

Kang Seong-Mo, Gyeongsang National University, Chinju. Manipulation of the nitrogen and carbohydrate economy of plants and their productivity by modifying the senescence process, at the University of Illinois, Urbana, Illinois. (Renewal)

Health Sciences

Nigeria

Adelani Ogunrinade, University of Ibadan. Development of an antigen detection assay in onchocerciasis, at the Jewish Hospital of St. Louis, Missouri.

Population Sciences

India

M.R.S. Rao, Indian Institute of Science, Bangalore. Molecular mechanisms in mammalian meiotic recombination, at Dana-Farber Cancer Institute, Boston, Massachusetts.

Mexico

Maria del Carmen Clapp, National University of Mexico, Mexico City. Role of 16K prolactin as an angiolytic agent on the development of estradiol-induced prolactinomas, at the University of California, San Francisco.

Gonzalo Martinez de la Escalera, National University of Mexico, Mexico City. Mechanisms involved in regulating the secretion of prolactin, at the University of California, San Francisco.

Officers and Staff

Report of the Secretary
Asset Growth
The market value of the Foundation's investments increased 9.6 percent during 1988. The year-end market value of $1,797 million was a record level for the Foundation.

The graph below places year-end 1988 asset values into 10-year historical perspective. Assets in nominal dollars have grown at a 9.2 percent annual rate over the 10-year period. Adjusted for inflation, assets grew at a 3.8 percent annual rate.
**Asset Mix**

As this table indicates, the Foundation continued diversifying into real estate and venture capital during 1988.

<table>
<thead>
<tr>

<tr>
<td>Total Assets</td>
<td>81,797</td>
<td>100.0%</td>
</tr>
</tbody>
</table>

**Investment Returns**

The total return on assets for 1988 was +14.2 percent. Cumulative returns for the past 10 years are shown by the top line in the graph below. The average compound rate of return for this period was 15.1 percent.

The graph also shows returns adjusted for inflation and returns adjusted for inflation plus 5 percent. The inflation plus 5 percent benchmark represents the minimum return that would permit the Foundation to make the minimum payout under current law and still maintain the value of remaining assets in real dollar terms. As the graph indicates, returns have exceeded the inflation plus 5 percent benchmark over this 10-year period.

[Index: 1978=100, Ratio Scale]
Investment Managers
The Foundation had five equity managers at the end of 1988: Concord Capital; Geewax Terker; Rosenberg Institutional Equity Management; Warburg, Pincus Counsellors; and Wells Fargo Investment Advisors. Bonds are managed by three firms: Rosenberg Capital, Security Capital, and Wells Fargo. Foreign securities are managed by Wells Fargo. A portion of cash reserves is managed internally. Northern Trust is custodian for domestic assets.

Spending
Spending in 1988 totaled $73.7 million, down 14 percent from the $85.7 million spent in 1987. The graph below places 1988 spending into 10-year historical perspective. Spending in nominal dollars had been relatively flat for the first seven years of this period. In real dollar terms, the sharp jump in the past three years has regained the ground lost during the late 1970s and early 1980s.
Expenditures by Categories
Expenditures by categories for the three years 1986-88 are shown in the table below.

1988-87 Financial Statements

Report of Independent Public Accountants
The Board of Trustees
The Rockefeller Foundation

We have audited the accompanying statement of assets, obligations and principal fund of the Rockefeller Foundation at December 31, 1988 and 1987, and the related statements of operations and changes in principal fund and changes in financial position for the years then ended. These financial statements are the responsibility of the Rockefeller Foundation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with generally accepted auditing standards. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Rockefeller Foundation at December 31, 1988 and 1987, and the results of operations, changes in principal fund and changes in financial position for the years then ended in conformity with generally accepted accounting principles.

1. Investments

 Marketable securities are reported on the basis of quoted market value, and investment income and expenses are reported on the accrual basis. Realized gains and losses are calculated based on the specific identification method for both financial statement and tax return purposes. Limited partnership interests are recorded at appraised value, when available; and when not available, are recorded at cost and adjusted for the Foundation's share of the limited partnership income or loss.

*Common stock includes $545,149,315 and $398,022,501 in money market funds attributable to an arbitrage of S&P 500 Index Futures versus the S&P 500 on December 31, 1988 and December 31, 1987, respectively.

2. Federal excise tax

The Foundation qualifies as a tax-exempt organization under Section 501(c)(3) of the Internal Revenue Code and, accordingly, is not subject to federal income tax. However, the Foundation is classified as a private foundation and is subject to a federal excise tax of 2% on investment income less investment expenses, and on net realized taxable gains on security transactions. In accordance with Section 4940(e) of the Internal Revenue Code, during the years ended December 31, 1988 and 1987, the Foundation has met the specified distribution requirements and is subject to a federal excise tax of 1% in place of the 2% tax.

Deferred federal excise tax arises from timing differences between financial and tax reporting relating to investment income and the difference between the cost basis and market value of marketable securities.

3. Property

Expenditures for capital items are included in the property account and depreciated on a straight-line basis over the lives of the respective assets or amortized over the term of the lease. The net change in the property account in 1988 was caused by additions of $235,481 and a decrease of $700,609 attributable to depreciation and amortization. Depreciation and amortization totalled $568,626 in 1987.
4. Pension, Post-retirement Health Care and Trusteed Savings Plans

The Foundation maintains a non-contributory pension plan for regular salaried employees who are at least 21 years old and have completed one year of service or have attained the age of 40. The plan provides retirement benefits based on years of service and final-average pay, with benefits after retirement subject to increase under a cost-of-living augmentation formula. Plan assets are invested in a diversified portfolio of common stocks and fixed-income securities. Effective January 1, 1987, the Foundation adopted the Statement of Financial Accounting Standards No. 87, “Employers’ Accounting for Pensions” issued by the Financial Accounting Standards Board.

The plan’s funded status and the amounts recognized in the Foundation’s statement of financial position at December 31, 1988 and 1987 are as follows:

<table>
<thead>
<tr>
<th></th>
<th>1988</th>
<th>1987</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

© 2003 The Rockefeller Foundation
The projected benefit obligation for the plan was determined using an assumed discount rate of 9% and an assumed long-term compensation increase rate of 6%. The assumed long-term rate of return on plan assets was 9%.

The Foundation also maintains a Trusteed Savings Plan for regular salaried employees under which Foundation contributions are made to equal employee contributions of up to 5% of pay. The combined contributions are credited to the employees' accounts. These accounts are invested and at termination of employment, the employee receives the account balance. The Foundation's contributions to this plan were $205,880 for 1988 and $175,630 for 1987.

The Foundation provides certain health care and life insurance benefits for retired employees. The cost of providing these benefits is recognized by expensing the related annual insurance premiums.

5. Appropriations and expenditures

Appropriations by the trustees are considered to be obligations when grants are approved for specific grantees; appropriations not released for specific grantees and the appropriation for the budget for the next year are considered as appropriated principal fund. Administrative costs are charged to operations when incurred.

Appropriations and expenditures for the year are summarized as follows:

<table>
<thead>
<tr>
<th>appropriations for specific grantees/purposes</th>
<th>Appropriated for allocation and next year's budget</th>
<th>Total Appropriated</th>
</tr>
</thead>
<tbody>

6. Long-term leases

At December 31, 1988, base rental commitments under non-cancellable leases for headquarters office space aggregate approximately $3,810,000 and are payable at approximately $720,000 annually until 1994. Under the leases, the Foundation is required to pay additional amounts for maintenance, electricity and taxes. The Foundation has subleased portions of its space under two separate sublease agreements. Net rental income under the first sublease will be approximately $630,000 and under the second approximately $260,000 during the remaining period of the leases. Rental expense included in the statement of operations was approximately $1,076,000 in 1988 and $1,027,000 in 1987.

The annual meeting of the board of trustees for 1988 was held on March 29, and regular meetings of the board were held on June 14, September 15-16, and December 13. Special meetings of the board were held on January 8, April 30, and October 4. There were no meetings of the executive committee during 1988.

Karen N. Horn, chairman and chief executive officer of Bank One, Cleveland, was elected a trustee, effective September 15.

Richard W. Lyman, president of the Foundation since 1980, retired, effective June 30. Peter C. Goldmark, Jr., senior vice-president of the Times Mirror Company, was elected president of the Foundation, effective July 1.

Hugh B. Price, senior vice-president and director of the Production Center at WNET/Thirteen, was elected vice-president of the Foundation, effective November 28.

Applying for Foundation Assistance

The Rockefeller Foundation works in three areas: international science-based development (including the agricultural, health, and population sciences) and, in the United States, the arts and humanities and equal opportunity.

To accomplish lasting results with limited resources, the Foundation concentrates its grants and fellowships on purposes approved by the Foundation’s board of trustees and expressed in program guidelines. These guidelines have been summarized to introduce each program section of this annual report. Copies of the guidelines in full are available from the Foundation.

The Foundation employs a staff of experienced professionals, augmented by consultants and advisory panels, to plan, develop, and conduct its programs. Members of the staff, in order to meet their responsibilities, are expected to travel widely and study extensively, keeping abreast of relevant literature, visiting Foundation-supported projects, and talking with others in the field.

Many grants therefore stem from proposals stimulated by staff interactions with individuals and institutions that have the qualifications needed to accomplish the objectives of our programs. Other grants and Foundation fellowships are made through publicized competitions designed to advance program goals. We also receive approximately 8,000 unsolicited proposals each year, and while most are declined because they are for purposes outside the Foundation’s program guidelines, we review the remainder, and within budgetary limits, fund them on a competitive basis.

Grants
The Foundation’s principal work is done through appropriations, each of which authorizes more than $100,000 for a specific programmatic purpose and is approved by the board of trustees. Direct appropriations are approved by the board as grants to a specific institution. Other appropriations are approved by the trustees for subsequent allocation by the staff. Within the approved purpose and dollar total, the staff allocates these appropriations as a series of grants, after they have reviewed proposals, selected the recipients, and determined the grant amounts and specific activities to be funded. The staff is also authorized each year to make a limited number of grants-in-aid to institutions and individuals, in amounts of $100,000 or less, for purposes within the Foundation’s guidelines.

The factors considered in evaluating grant proposals include: the proposed project’s potential for accomplishing its objectives and contributing significantly to the well-being of mankind; the relevance of the project to our programs; the applicant’s qualifications and record of achievement; and the extent of the applicant’s effort to secure additional and subsequent funding from other sources.

Fellowships
The Foundation offers fellowships for training and to assist in the production of a piece of work. Advanced training fellowships, biotechnology career fellowships, and social science research fellowships are given to help prepare outstanding younger scholars and scientists, primarily from the developing world, to make significant contributions to research and training or to public service. In addition, a number of special fellowships are announced and awarded annually through specific Foundation programs.
Limitations
As a matter of policy, we do not give or lend money for personal aid to individuals; contribute to the establishment of local hospitals, churches, schools, libraries, or welfare agencies, or to their building and operating funds; finance altruistic movements involving private profit; or support attempts to influence legislation.

The Rockefeller Foundation does not normally provide general institutional support or endowment. We do make occasional exceptions for organizations or institutions in which we have played an important creative role, and organizations that serve and support organized philanthropy in the United States. Although we seldom give general or core support, we try to ensure that the full direct costs of a project are taken into account in the calculation of grant budgets.

External Affirmative Action Policy
The Rockefeller Foundation believes that important issues of underrepresentation of minorities and women remain unresolved in our society, and we seek to play a helpful and constructive part in their resolution. To that end, the Foundation systematically invests in the professional development of minorities and women and their promotion into leadership roles. The Foundation expects grantee organizations in the United States to do the same.

Consequently, affirmative action questions will be raised with U.S. applicants and grantees when there appear to be opportunities for constructive collaboration with the Foundation in the interests of improving opportunities for underrepresented groups. In such instances, as a first step, we may ask these institutions to inform us of their efforts, supported, as appropriate, with data on the gender and minority composition of the leadership of the institution.

Proposals and Applications
No special form is required to apply for a grant or fellowship, but the proposal or application should include:

- A description of the proposed project or fellowship activity, with clearly stated plans and objectives;
- A comprehensive plan for total funding during and, where applicable, after the proposed grant period; and
- A listing of the applicant’s qualifications and accomplishments.

Proposals and applications should be sent to the secretary of the Foundation or to the director of the relevant division or program. An application form is required to apply for a conference or residency at the Bellagio Study and Conference Center. Send your request to the attention of the Bellagio Conference Office.

For more information about the Foundation, send your inquiries to the Communications Office.
